ABSTRACT

Detailed descriptions of the data analysis procedures used in Project EDNEED (Empirical Determination of Nationally Essential Educational Data) are contained in this volume, the last of a five-volume final report. Results of the application of procedures and a narrative interpretation of the results are included. Priority rankings of 323 questions found in the related "EDNEED Classification" document are arranged in 28 tables. For each of the 28 priority rankings, the following statistics are computed: (1) The mean rank of questions within each file, (2) the minimum rank and the maximum rank for questions within each file, (3) the range of the ranks within each file, (4) the rank order of the files ranked according to the mean rank of each file, and (5) the Kruskal-Wallis H statistic which is used to test the hypotheses that the files differ according to mean importance of questions. Appendix A provides an example of priority ranking procedures. Appendix B discusses the determination of weightings to be used in priority determination, and Appendix C contains tabular presentation of data questions prioritized by similarity index according to level and use. (TA)

Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affects the quality of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). EDRS is not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from the original.

ACKNOWLEDGMENTS

Project EDNEED is deeply indebted to scores of agencies and literally hundreds of individuals who contributed freely of their time and expertise in order that the project could be completed. Many of the persons who rated and checked the Classification document and their respective agencies are listed as participants in the reports of the various conferences. Nearly fifty staff persons from the American Vocational Association; the National Advisory Council on Vocational Education; the National Center for Educational Statistics; the National Institute of Education; the Bureau of Labor Statistics, U. S. Department of Labor; and the U. S. Office of Education reviewed the "Preliminary Taxonomy" and collectively made hundreds of suggestions for its modification and improvement into what became the conference edition of the Classification document.

Of these agencies, the U. S. Office of Education and particularly the Bureau of Occupational and Adult Education deserves special mention. Personnel from every division in the Bureau were involved in some way in the project. Input into major project decisions in the form of advice and counsel is gratefully acknowledged from Deputy Commissioner William F. Pierce, Associate Commissioner Charles H. Buzzell, Division Director Howard Hjelm, Branch Chief Glenn Boerrigter and especially from Jack Wilson, Project Monitor.

Finally, appreciation is gratefully extended to the former Project Director, Dr. Robert L. Morgan, and to the more than thirty present and former Center for Occupational Education staff members, without whose efforts and dedication the project could not have been brought to fruition.

G. William Porter
Project Director

PROJECT SUMMARY

Purpose and Objectives

EDNEED I was conceived as an important first step toward the development of a basic information system for vocational education. The project had three purposes: (1) to determine, empirically, the extent to which selected data questions represent the vocational education informational needs of users at the national, state and local levels; (2) to prioritize the data questions according to their degree of relative importance across levels and within levels by use category (planning, operation, evaluation, finance and budgeting, reporting requirements, public information); and (3) to determine similarities in information needs across levels and use categories.

The central premise of the project was that once the information needs were determined and prioritized, a basic core of data questions and associated information elements could be empirically derived which would meet the shared informational needs of the three levels on a priority basis. The size and composition of the core would be a function of the need priority and the amount of resources available for allocation.

The three project purposes were translated into four operational objectives, each of which served to identify a milestone phase of the project. The phases and their accompanying operational objectives are as follows:

> Phase I - To identify important questions in vocational education and those information elements necessary to provide answers to the questions.

Phase II - To refine the data questions and information elements (identified in Phase I) through the involvement of selected national user groups; to define each information element; and to collect data on national needs.

Phase III - To determine empirically the relative need for each of the data questions (by use category) through ratings by representative state and local data users. To further review and critique the questions and information elements and to identify and provide recommendations for the resolution of problems and issues associated with the future development of a national vocational education information system.

Phase IV - To analyze the ratings to determine priority data needs across levels (local, state and national) and uses (planning, operation, evaluation, finance and budgeting, reporting requirements and public information). To produce a final report of the results.

Procedures

The major steps in each of the four phases are shown graphically in Figure 1. In Phase I, two approaches to the identification of sources were utilized: first, a literature review and second, direct visitation to various potential user groups. Over 100 individuals representing more than 50 national, state and local agencies and organizations who were expected to have needs for vocational education data were contacted in an effort to identify recurring questions at administrative and policy-making levels. A secondary purpose of the agency contacts was to explain the project and secure the support of agency representatives for subsequent

participation in Phase II. To facilitate this purpose a 35mm slide presentation was developed and used widely to disseminate information about the project.

As questions were identified, each was analyzed to determine those information elements from various sources which if known, could serve to answer the questions. Broad questions were broken down into components which could be answered by a single information element or group of information elements. Thus, whether a state provided for, or emphasized, one or more of the many types or levels of vocational education, the information elements were designed to allow for full coverage of elementary, secondary, postsecondary, adult, handicapped, disadvantaged and other specialized offerings.

A detailed taxonomy of information elements of potential utility to national, state and local user groups (an interim report) was prepared and was ready for in-house review in late January, 1975. This draft document, entitled "Project EDNEED: Preliminary Taxonomy for the Development of a National Vocational Information System," consisted of 20 informational files. A file was defined as a collection of similar information elements. The files were in turn organized into five parts or classes to reflect the organizational structure of the vocational education delivery system. Following a rigorous in-house review, the "Preliminary Taxonomy" was delivered in Phase II to representatives of six user groups selected for their centrality to vocational education data needs. An abundance of suggestions were received, focusing mainly in two areas (a) changes in the structure and organization of the document and (b) addition of data questions and information elements.

As a result of this review by the six selected national agencies, an intensive effort was mounted by Center staff to incorporate the suggestions into a completely revised taxonomy in time for review, rating and checking by the conference of national users scheduled for mid-March in Annapolis, Maryland. The revised document was entitled Project EDNEED: Classification of Information for the Development of a National Vocational Information System and comprised Volume II of the Project EDNEED Final Report. Referenced hereafter as the Classification document or the EDNEED Classification, this revised document differed substantially from the original "Preliminary Taxonomy." The five-part division was replaced by a four-level division with connecting files, making the aggregation potential more explicit. The number of files was reduced from 20 to 18, and nearly 100 new information elements were added. The most striking change, however, occurred as a result of the arrangement of the information elements as subtopics or possible answers to data questions. Thus, the conference edition of the EDNEED Classification included 323 questions as well as 2340 information elements. For each of the 323 questions, respondents were asked to check whether or not their agency presently asked the question or would ask it if the information were available. If a respondent checked either of the above, he/she was then asked to indicate (on a six-point scale ranging from "no importance" through "critical importance") how important the question was for each of six use categories: planning, operations, evaluation, finance and budgeting, reporting requirements and public information. The raters were further asked to indicate for each question checked, those information elements associated with that question that were needed to answer the question.

An ongoing effort was maintained during Phases I and II to produce a Lexicon of definitions of key terms used in describing the data questions and information elements. Draft copies of the revised Lexicon were available for use by the national data users at the Annapolis Conference as well as for subsequent conferences in Phase II. Production of the report of that conference marked the end of Phase II.

Phase III consisted of three similar conferences, one for state level user group representatives and two for local level users. As at the national level, state and local conferees were presented with the EDNEED Classification document in advance of the conference and asked to check those data questions needed and to rate each one checked according to its importance for each of the six use categories indicated previously. At each of the conferences, participants were asked to make suggestions and recommendations in three areas: (a) the adequacy of the Classification document; (b) the identification of problems and issues to be encountered in the development of a basic vocational education data system; and (c) the generation of solutions to the problems. Detailed reports of all four conferences are contained in Volume IV of the EDNEED Final Report.

Phase IV consisted of the completion of the conference reports, the design of a plan for the analysis of the data generated by the rating and checking process, the analysis of the data and the production of a five-volume final report. Entitled Data Needs in Vocational Education, each volume of the final report is subtitled as follows:

Volume I	Summary of Procedures and Results
Volume II	Project EDNEED Classification of Information
Volume III	Project EDNEED Lexicon

Volume IV Issues and Recommendations
Reports of the EDNEED Conferences

Volume V Data Analysis: Procedures and Results.

For more detailed information about any aspect of the study, the reader is referred to the appropriate volume.

Findings and Results

Although summarized in detail in Volume I, the results of the project are reported in Volumes IV and V. Only the highlights are presented here.

- A national system for vocational education data collection with emphasis on uniformity of data and format is critically needed.
- Standardized national definitions for data elements must be of the highest priority.
- A national data system will require federal funding and support.
- "Change" must be incorporated as a characteristic for any vocational education data system. Additions and deletions of data will be constant.
- The extent to which data will be used, by whom, and for what purpose must be established early, as well as the locus of control and physical location of the system.
- There appears to be little coordination among existing data systems, or among data producers and data users.
- Consideration must be given to the already heavy "data burden" on state and local education agencies. Statistically sound sampling is an alternative worth exploring in this regard.
- State vocational education agencies are both data producers and data users. The data burden problem falls most heavily on

their shoulders and they appear reluctant to become involved in activities which might increase the burden.

- A definitive study of data sources now in place is crucial. Any national data system should be designed to use every available data source. Only data which are highly needed but not currently available should be added.
- A national data system should provide a means for ensuring that data aggregated upward from local education agencies could be directed back to them in a timely and meaningful way. Local administrators indicated that this is often not the case at present, even with their own state MIS's.
- Vocational educators must learn to measure fitness for employment of graduates and early leavers in terms of their acquired and demonstrable competencies rather than in terms of courses taken and hours spent in classrooms, labs and shops. Such measurement data in a system could provide a basis for accurate studies of the costs of instruction vs. the benefits of placing people in employment.
- Local education agency data users have a greater need for curriculum information than either national or state users.
- State users have less need for data on student characteristics than either national or local users.
- Local data needs are more congruent with a national orientation than a state orientation.
- State data needs are more congruent with a national orientation than with a local orientation.
- National data needs are more congruent with a local orientation than a state orientation.

- Information on the characteristics of the curriculum and instrucational processes was the most important category of information need across all levels and uses.
- Information concerning the characteristics of vocational program completers and early leavers was the most important category of informational need over all uses at the national level.
- Information on the characteristics of the curriculum and instructional processes was the most important category for both local and state users over all uses.
- There is a distinct demand at all levels for data descriptive of vocational education at the "grass roots." At all levels, users are most interested in knowing who is being served, what they are being served, and what happens as a result of their being served.
- National data needs for planning, evaluation, reporting requirements and public information are distinct from national needs for operations and finance/budgating data.
- State data needs for planning, operations, finance/budgeting and reporting requirements differ from state data needs for evaluation and public information.
- Local needs for data appear to be relatively consistent across all uses.

PROCEDURES

Data Source

Data for the empirical determination of informational needs were obtained by having selected individuals rate three hundred and twenty-three (323) questions and 2340 informational elements. Informational elements were nested under questions and represented possible information that might be used to answer specific questions about the context, input, process, product and impact of vocational education.

Questions and informational elements were presented to the raters in the form of a Classification document. A copy of the Classification document is presented in Volume II. Questions within the Classification document are classified into 18 files. Each file represents a class of questions about a topical area, e.g., staff, property, students. The files follow the hierarchical organization of public education in that there are files pertaining to the curriculum, the school, the local education agency and the state education agency.

The files contained in the EDNEED Classification are described briefly below. It is perhaps important to note at this point that the file content and structure are addressed to public vocational education. Thus, the files cover only those students, curriculum, staff, property, and expenditures directly associated with public controlled vocational education. The selection of expenditure accounting as opposed to accrual accounting reflects the historical preference in education for expenditure accounting.

File 1: Vocational Curriculum and Instructional Characteristics

Refers to characteristics descriptive of a specific vocational education curriculum in a specific school (e.g., auto mechanics). Characteristics include the identity of the curriculum in terms of its location, program area (e.g., Trades and Industry or Home Economics), program level (e.g., elementary, secondary, postsecondary, adult or other); accrediting and approval status; entrance and completion requirements; planned instructional outcomes; instructional media and methods; procedures for evaluating outcomes; occupations trained for in the curriculum; and postschool outcomes. Also included are characteristics of buildings utilized by the curriculum; staff allocated to the curriculum; expenditure information and curriculum advisory committee information.

File 2: Vocational Curriculum Expenditures by Activity

Refers to the expenditures for a specific curriculum in terms of the activities staff members perform in carrying out their assigned responsibilities in a secondary, postsecondary, adult or special vocational facility. Included are expenditures for classroom, laboratory, and related technical instructional activities that support instruction, such as administration, counseling and guidance, and curriculum development. While not expenditures in the strictest sense, transfer payments such as student stipends, employer reimbursements and payments to other LEAs are included for completeness. Debt service expenditures allocated to the curriculum are also included.

File 3: Vocational Curriculum Expenditures by Local Assignments

Refers to the expenditures for a specific vocational curriculum in terms of the duty assignments performed by local vocational education staff. Major assignment classifications include instruction, administration, instructional and pupil support services, and community support. Expenditure information includes transfers and debt reduction.

File 4: Vocational Curriculum Expenditures by Object

Refers to the expenditures for a specific curriculum in terms of such objects of expenditure as salaries, employee benefits, purchased services, supplies and materials, equipment, land and buildings. Also includes the expenditures for the debt service and transfer payments.

File 5: Vocational Student Characteristics

Refers to the characteristics of a specific vocational education student. Characteristics include age, racial and ethnic origins, cultural background, socioeconomic background, physical condition, curriculum enrollment membership and attendance data, test information, future education and career intentions and employment history while in school.

File 6: Characteristics of Vocational Completer/Early Leaver

Refers to the characteristics of completers and/or early leavers from vocational education curricula. Included are those who graduate and those who withdraw from school prior to completion of the curriculum. Includes characteristics regarding current status, e.g., employed, going to school, military, etc. Employment information includes such items as current employment status, earnings on past and current jobs, and current employer's evaluation of job performance.

File 7: Local Education Agency Vocational Staff Characteristics

Refers to the characteristics descriptive of vocational education staff. Includes personal characteristics such as age, sex, and marital status; level of education; credentials held; work experience; educational experience; position title; activities performed; curriculum assignment; and such other job-related characteristics as salary, fringe benefits, etc.

File 8: Local Education Agency Vocational Property Characteristics

Refers to the characteristics of the property used in the conduct and/or support of vocational education in a school or LEA. Includes such factors as location of site; ownership of site; cost of site; uses made for vocational purposes; numbers of buildings on the site and their instructional characteristics. Also included is information concerning equipment, supplies and materials located on the site(s) and their allocation to curricula.

File 9: Local School Characteristics

Refers to the characteristics of a school conducting vocational education. Characteristics include the type of school by grade (elementary, high school, postsecondary) and by program offering (e.g., comprehensive high school); students served by the school; the curricula offered; school entrance requirements; characteristics of vocational staff assigned to the school; facilities of the school used for vocational purposes; available school support services; school expenditures; community school relations; and curricular information aggregated over vocational education curricula.

File 10: Local Education Agency Characteristics

Refers to the organizational characteristics of the public agency having administrative control and direction of vocational education. Contains such characteristics as number of schools operated; organizational structure of vocational education; vocational curricula offerings; total LEA staff and facilities; total student enrollment in vocational curricula; expenditures; community relations; and cooperative arrangements with external agencies.

File 11: Local Vocational Education Service Area Characteristics

Refers to the geographic area served by the LEA in terms of target population characteristics, the geographic coverage of vocational curricula, the employment characteristics of the population, and opportunities for employment. Also included are general economic characteristics, educational characteristics and other specialized information related to the service area.

File 12: Vocational Characteristics of State Education Agency

Refers to characteristics of the state agency having legal responsibility for the administration of vocational education. Characteristics include the total expenditures by federal, state and local sources for vocational education; methods used for allocating federal and state funds for vocational education to LEAs; total state enrollments, expenditures, completers/early leavers and staff related to the statewide vocational education program. Includes also aggregate LEA data as described in the LEA files.

File 13: State Education Agency Vocational Education Expenditures by Activities

Refers to the state level expenditures in terms of activities performed by state vocational education personnel in carrying out their specific job duties. Included are expenditures for general management activities, planning and research activities, improvement and approval of program activities, support services activities, agency operated schools activities, institution and consultation services activities, and nonprogrammed charges and debt services.

File 14: State Education Agency Vocational Education Expenditures by Assignment

Refers to the vocational education expenditures of a state education agency in terms of the duty assignments of the staff responsible for the state vocational education effort. Major assignments include instruction and instructional support, pupil support, administration support, and community support.

File 15: State Education Agency Vocational Education Expenditures by Object (Service or Commodity)

Refers to and describes the expenditures by the state agency by object of expenditure. Includes expenditures for such services and commodities as SEA staff salaries and benefits; supplies and consumable materials; equipment; land and buildings; purchased services such as printing and binding; transportation costs; and telephone charges. Grants and subsidies to local education agencies and other educational segments of the state system are included for completeness.

File 16: State Education Agency Vocational Education Staff Characteristics

Refers to the characteristics of a state level staff member responsible for vocational education. Includes such biographical characteristics as sex, age, race, and physical condition. Also included are those characteristics that describe the professional education; educational experience; work experience related to the occupations offered within vocational education; credentials; salaries; employment status; position assignment; activity allocation; and source of funds used to support vocational staff members.

File 17: State Education Agency Vocational Education Property Characteristics

Refers to the property utilized by the SEA in the conduct and service of statewide vocational education. Includes characteristics of the property that describe the ownership of the property; its location geographically; costs of sites; acreage; condition of buildings on sites; areas within buildings; information on rooms (shops, classrooms, laboratories), equipment and library books. Also included is information on the allocation of state property by staff activities, staff assignments, program level and program area.

File 18: General Characteristics of the State

Refers to characteristics generally descriptive of the state as a geo-political entity. Included are population characteristics; vital statistics (e.g., births and deaths); households information (e.g., numbers and sizes); employment characteristics (e.g., opportunities, labor supply and demand); educational characteristics; economic characteristics of state government; local revenue bases for schools; and information on the availability of training slots external to vocational education.

Raters were selected because they were considered to be representative spokespersons for public and private agencies and organizations judged to have need for vocational education information. The reader is referred to Volume IV for a description of the agencies and organizations represented. Raters were asked to indicate for each question in the Classification document whether their agency presently asked that question or whether their agency would ask that question if data were available. For all questions checked as presently "being asked" or "would ask if data were available," raters were asked to rate the question on a seven point scale of importance for each of six uses: planning, operation, evaluation, finance and budgeting, reporting requirements and public information. Additionally, raters were requested to identify those informational elements needed to answer the questions.

An example of a hypothetical rating is presented in Figure 1. By checking the first of the left-hand columns, the respondent indicated that his agency asks the question "WHAT ARE VOCATIONAL CURRICULUM AND INSTRUCTION CHARACTERISTICS?" By checking the first of the left-hand columns on the data question, the respondent indicated a need for answers to the data question "HOW IS THE CURRICULUM IDENTIFIED WITHIN SCHOOLS?" By rating the sub-file descriptor, the respondent indicated that answers to the data question are of critical importance for planning and public information uses, of average importance for evaluation, and of no importance for the remaining uses. By checking the informational elements "Curriculum and instructional code" and "Program level" the respondent indicated that these informational elements are needed to answer the data question.

Classification documents were sent to eighty-six (86) individual raters. Thirteen (13) individuals did not respond or otherwise failed to produce a usable document for analysis purposes. Of the remaining seventy-three (73) documents, thirty-four (34) were completed by raters representing national agencies and organizations, fourteen (14) by raters representing state agencies of vocational education, twenty-one (21) by raters representing local secondary and postsecondary agencies of vocational education and four (4) by raters representing private employers.

At the national level, several agencies were represented by multiple raters. In those cases the ratings were merged across raters to pro-

Figure 1. A Hypothetical Rating

duce a single rated Classification document indicative of that agency's need for vocational education data. At the state and local levels, each rater represented a unique agency or organization.

As a result of these mergers, the data source for analysis consisted of sixty-two (62) completed Classification documents, twenty-three (23) from national level agencies and organizations, fourteen (14) from state educational agencies and twenty-five (25) from local educational agencies, postsecondary institutions and private employers. For the purposes of analysis, these groups will be referred to as national level agencies, state level agencies, and local level agencies, respectively.

Data Preparation

Procedures were developed to ensure that the data contained in the completed Classification documents were consistent in format and usable as a data set. A data set consisting of the following nested classifications was constructed:

- User Level (National; State; or Local)
  - File Level (18 Classification Files)
    - Question Level (Number of questions within a File varies from 9 to 31, depending on the file)
      - Item Level (Number of informational elements attached to questions varies from 1 to 105, depending on the question)

Data from each completed Classification document was keypunched and entered into the data set. Most of the problems encountered in data preparation resulted from incomplete or inconsistently marked Classification documents. As can be seen from Figure 1, there are three opportunities for a rater to respond to any question. The rules for recording the individual ratings for each opportunity are as follows:

Opportunity A: If the rater checked either "ask" or "would ask," code as a "1"; otherwise leave as a blank space "ƀ,"

Opportunity B: If the rater placed an acceptable numerical rating in any of the six use categories, code as a "1," otherwise leave as a blank space "ƀ,"

Opportunity C: If the rater checked any of the information elements as needed, code as a "1," otherwise leave as a blank space "ƀ."

The combination of opportunities created the following eight possible situations with implications for data preparation:

A B C	
(1,1,1)	Rater made an overt response for each of the three rating opportunities; interpreted as a consistent response.
(1,1,0)	Rater made an overt response for opportunities A and B but did not indicate a need for any of the information elements, interpreted as a consistent response.
(1,0,1)	Rater made an overt response for opportunity A and C but not for B; inconsistent response interpreted as error of omission.
(1,0,0)	Rater made an overt response for opportunity A but not for B and C; inconsistent response interpreted as an error of omission.
(0,1,1)	Rater did not make overt response to opportunity A but did make a response to opportunities B and C; inconsistent response interpreted as an error of ommission.
(0,1,0)	Rater made an overt response to opportunity B but not to opportunities A and C; inconsistent response interpreted as an error of omission.
(0,0,1)	Rater made no overt response to opportunities A and B but did make a response to opportunity C; inconsistent response interpreted as an error of omission.
(0,0,0)	Rater made no overt response to any opportunity; interpreted as a consistent response.

For each question, three temporary data sets were formed in the data preparation process:

Set I - Contained situations (1,1,1); (1,1,ƀ); (ƀ,1,1) and (ƀ,1,ƀ).

Set II - Contained situations (1,ƀ,1); (1,ƀ,ƀ); and (ƀ,ƀ,1).

Set III - Contained situations (ƀ,ƀ,ƀ).

Set I for each question contained all the raters who by giving a non-zero response to at least one use category indicated that the question was of some importance to them. The ƀ's in Set I for rating opportunity A were converted to 1's. The b's in Set I for rating opportunity C were converted to 0's and the mean rating computed for each use category. In Set II, all ƀ's for rating opportunity A were replaced by 1's. All ƀ's in rating opportunity C were converted to 0's. All ƀ's for rating opportunity B (use categories) were replaced with the mean values of the respective use category.

The rationale for the replacement was that blanks for rating opportunity B were assumed to be errors of omission rather than an indication of no importance. The support for this contention is that raters in Set II have given indication that the question is of some importance. In situation (1,ƀ,1), raters indicated they either did ask or would ask the question and also checked at least one information element as being needed. In situation (1,ƀ,ƀ), the raters indicated that they would or did ask the question. In situation (ƀ,ƀ,1), raters indicated that at least one information element was needed to answer the question. Hence, in all three situations, there is reason to assume that the question was of some importance to the raters. The best estimate of the degree of importance for each use for these raters is provided by the mean use rating computed across those raters in Set I.

All b̸'s in Set III were replaced with 0's since blanks in the rating situation (b̸,b̸,b̸) indicated a consistent response to the rating opportunities. These three data sets were then merged and all 1's in rating opportunity B were replaced with the numerical values of the ratings so that numerical operations could be performed. By this procedure, an edited data set was created for each question which contained 1's and 0's as responses to whether the question was or would be asked and whether the particular information element was or was not needed to answer a question and numbers ranging from 0 to 6 indicating the degree of importance assigned by the raters to each use category. Several partial printouts of the data were inspected to ensure that observations were within their proper range of values, the proper number of items per question and questions per file were represented, and that each rater was accurately identified.

Similarity Index

In order to determine the importance of each question, a similarity index (S) was devised. The similarity index varies between 0 and 1 according to the degree of correspondence (similarity) of the assigned ratings for each use category with maximum possible ratings. Thus a similarity index of 1 would indicate that all raters assigned the highest possible importance rating to a given question for that particular use category. A similarity index of 0 for a question would indicate that every rater assigned the lowest possible importance rating to the question for the use category under consideration. The similarity index was defined for every question in the EDNEED Classification by use category and by levels (national, state, local) according to the following formula:

$$S_{ijkl} = \frac{\sum_{m=1}^{N_k} U^2_{ikjklm}}{36 \quad N_k}$$

where i refers to the file, j refers to the question within a file, k refers to the level, l refers to the use category, m refers to the rater, and N_k = the number of raters at the k^{th} level. The variable U_{ijklm} represents the importance rating (0 to 6) which rater m assigns to the l^{th} use category for question j located in the i^{th} file of the Classification document. It is easily seen that if all raters at a given level gave the question a rating of 6 for a particular use, the similarity index would be unity. Conversely, if all raters at a given level gave the question a rating of 0 for a particular use, the similarity index would be 0.

The derivation of the similarity index follows directly from an application of analytic geometry. Suppose that we define a vector of observed ratings for the N_k raters at level k

$$_{obs}\overline{U}_{ijkl} = (U_{ijkl1}, U_{ijkl2} \cdot \cdot \cdot U_{ijklm} \cdot \cdot \cdot U_{ijklN_k})$$

and a vector of maximum possible scale ratings for the N_k raters at level k

$$_{max}\overline{U}_{ijkl} = (6, 6, . . . 6, . . . 6).$$

Then, the degree of importance of question i for the N_k raters is determined by the similarity of the vector of obtained ratings, $_{obs}\overline{U}_{ijkl}$, with the vector of maximum possible ratings, $_{max}U_{ijkl}$. The more similar the observed vector is to the maximum vector, the more important is the observed vector. The problem, therefore, is one of measuring the similarity between two vectors.

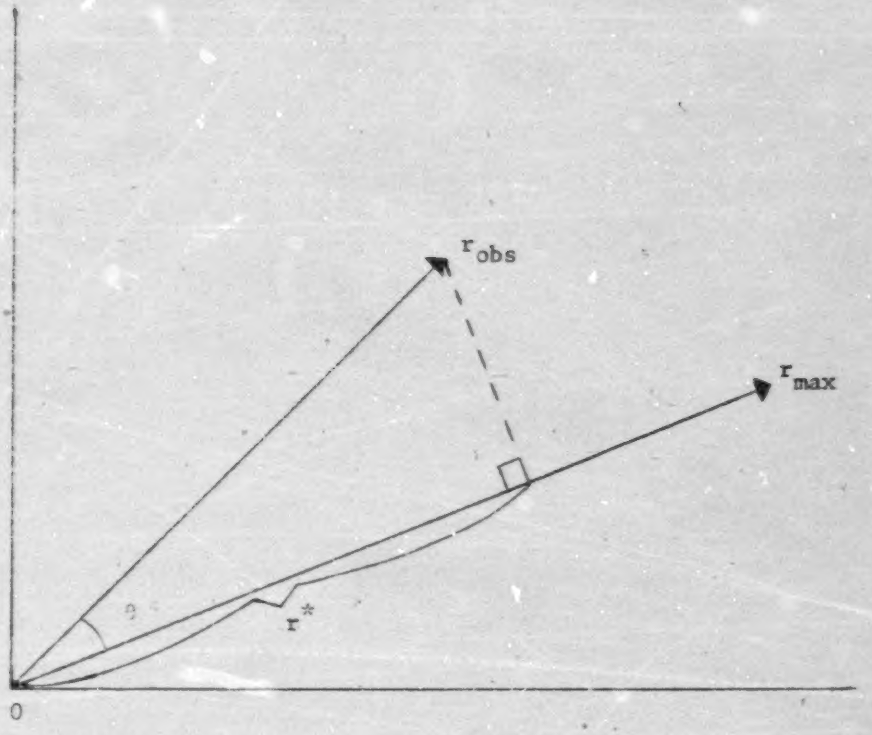
The relative position in space of two vectors (directed lines) having a common origin at 0 is uniquely determined by their length and the angular separation between them. Two vectors have maximum similarity (complete overlap) when both have the same length and their angular separation is 0. The degree of overlap diminishes as angular separation and/or disparity of length increases. Thus, any measure of similarity (overlap) of vectors must be sensitive to both length and angular separation.

One measure that is sensitive to both angular separation and length is the projection of a shorter vector onto a longer vector (See Figure 2). In Figure 2, the length of the longer vector is designated as r_{max}, the length of the shorter vector as r_{obs}, the angular separation as Θ and the projection of the shorter vector onto the longer vector as r^*. It is obvious that as the shorter vector is rotated counterclockwise, r^* will decrease towards 0. If Θ is held constant and r_{obs} is decreased, r^* will also decrease towards 0.

An intuitively obvious index of the similarity (overlap) of the shorter vector with respect to the longer vector is the ratio r^*/r_{max}. This ratio gives the proportion of the length of the longer vector accounted for by the projection (overlap) of the shorter vector onto the longer vector. When the two vectors have equal length and 0 angular separation, there is perfect overlap and $r^*/r_{max} = 1$. When the two vectors are at right angles, there is no overlap and $r^*/r_{max} = 0$.

Since, from analytic geometry, we have that $r^* = r_{obs} \cdot \cos \Theta$, the similarity index, S, can be written as

$$S = \frac{r^*}{r_{max}} = \frac{r_{obs}}{r_{max}} \cdot \cos \Theta .$$



r_{obs}
r_{max}
θ
r^*
0

Figure 2. Spacial Representation of Projection of a Shorter Vector r_{obs} on a Longer Vector r_{max}

Given the vectors $_{obs}\overline{U}_{ijkl}$ and $_{max}\overline{U}_{ijkl}$ as previously defined, let r_{obs} be the length of $_{obs}\overline{U}_{ijkl}$ and r_{max} be the length of $_{max}\overline{U}_{ijkl}$. Then from analytic geometry, we have that

$$\text{Cos } \Theta = \frac{6 \sum_{m=1}^{N_k} U_{ijkl}}{r_{obs} \cdot r_{max}}$$

and upon substitution

$$S_{ijkl} = \frac{6 \sum U_{ijklm}}{r_{max}^2} .$$

But since $r_{max}^2 = N_k \cdot 36$, the similarity index can be conveniently expressed as

$$S_{ijkl} = \frac{\sum_{i-1}^{N_k} U_{ijklm}}{6 \cdot N_k} .$$

Although the formulation provides a geometrically intuitive measure of similarity in terms of the proportion of the length of the maximum vector accounted for by the projection of the observed vector, one problem yet remained. That problem is exemplified by the fact that, for example, six raters each giving a rating of 1 would be equivalent to one rater giving a rating of 6 and 5 raters giving a rating of 0 since the similarity index is a function of the sum of ratings. It was the contention of the project staff that questions rated as being of greater importance by smaller numbers of raters should have a higher similarity index than questions rated of lesser importance by larger number of raters even though the sums of the ratings might be equal.

This problem was resolved by first squaring each observed rating U_{ijklm} and then computing the similarity index between the vector of squared observed ratings and the vector of squared maximum scores. This resulted in the final formulation of the similarity index used in the project

$$S_{ijkl} = \frac{\sum_{m=1}^{N_k} U^2_{ijklm}}{36 \cdot N_k} .$$

The reader will note that the similarity index as so defined is simply the ratio of the mean of the squared ratings, $\overline{U^2}_{ijkl}$, divided by the square of the maximum rating, $(6)^2 = 36$.

The similarity index as defined above reflects not only the absolute importance that a group of raters attaches to a question but also the relative importance between questions. Thus, if question A has a higher similarity index than does question B, question A is assumed to be more important than question B for that group of raters. This assumed relation allows the similarity index to be used to order the questions in terms of their importance to a specific group of raters.

The reader is referred to Appendix A for a more complete discussion of the use of the similarity index in the determination of the comparative importance of a set of questions.

Data Analysis

Separate similarity indices were computed for each combination of the six uses and three levels for each of the 323 questions resulting in eighteen separate similarity indices for each question. In addition, for each question, the mean similarity index was computed across uses for each of the three levels, the mean similarity index was computed across levels for each of the six uses and an overall mean similarity index was computed across uses and levels giving a total of twenty-eight (28) similarity indices for each question.

The rather political questions as to whether the responses of all user group representatives at the national level should be weighted equally in priority determination, as to whether all levels should be weighted equally, and as to whether all use categories were of equal importance, posed a significant problem. In an effort to answer the questions in a manner satisfactory to USOE a six page paper outlining the problem and the various alternatives was developed and presented to the project monitor. The paper is included as Appendix B.

Project staff members then met with 15 individuals separately to discuss the weighting problem--nine from USOE, four from NCES, one from the Bureau of the Census and one Congressional Counsel. A decision was subsequently made to weight all national user groups, all three levels and all use categories equally in ranking questions by priority.

For each of the 28 combinations of use and level, the questions were ranked in descending order of magnitude according to the unweighted value of the similarity index. The analysis scheme is presented in Figure 3 where the notation (S_{ijkl}) in each cell represents a list of 323 questions prioritized according to descending magnitude of their similarity index.

The overall mean similarity index is the single most encompassing prioritization statistic since it spans all levels and uses. However,

USE CATEGORIES

		Planning 1	Operations 2	Evaluation 3	Finance & Budget 4	Report Requirements 5	Public Information 6	Mean by Level Over Use Categories
NATIONAL LEVEL	1	(S_{ij11})	(S_{ij12})	(S_{ij13})	(S_{ij14})	(S_{ij15})	(S_{ij16})	$(S_{ij1\bullet})$
STATE LEVEL	2	(S_{ij21})	(S_{ij22})	(S_{ij23})	(S_{ij24})	(S_{ij25})	(S_{ij26})	$(S_{ij2\bullet})$
LOCAL LEVEL	3	(S_{ij31})	(S_{ij32})	(S_{ij33})	(S_{ij34})	(S_{ij35})	(S_{ij36})	$(S_{ij3\bullet})$
MEAN BY USE CATEGORY OVER LEVELS		$(S_{ij\bullet 1})$	$(S_{ij\bullet 2})$	$(S_{ij\bullet 3})$	$(S_{ij\bullet 4})$	$(S_{ij\bullet 5})$	$(S_{ij\bullet 6})$	$(S_{ij\bullet\bullet})$ Overall Mean Similarity Index

Where:

$$S_{ij\bullet l} = \frac{\sum_{k=1}^{3} S_{ijkl}}{3}$$ = Mean Similarity Index by Use Category Across Levels

$$S_{ijk\bullet} = \frac{\sum_{l=1}^{6} S_{ijkl}}{6}$$ = Mean Similarity Index by Level Across Use Categories

$$S_{ij\bullet\bullet} = \frac{\sum_{l=1}^{6} \sum_{k=1}^{3} S_{ijkl}}{18}$$ = Overall Mean Similarity Index (i.e., over levels and use categories)

Figure 3. Analysis Scheme

because it is an overall average, the overall mean similarity index tends to blur distinctions between levels and uses. The mean similarity index by levels gives measure of the importance of the question across all use categories. The mean similarity index by uses gives a measure of the importance of the question across all levels of raters. The similarity index computed for each level and use gives a measure of the importance of a question at a specific level and for a specific use. There is a direct parallel with the analysis of variance model in that the mean similarity index by levels represents the effect of level of raters; the mean similarity index by use represents the effects of the uses to which the information is put, and the similarity index for specific uses and levels represents the interaction effect between level and use.

Examination of the interaction effects was facilitated by compiling for each question the ranks of that question in each of the twenty-eight prioritizations. In this manner, it is possible to see the relative importance of each question as a function of level and use.

In order to facilitate interpretation of the prioritization, the questions were grouped according to files. For each prioritization, the mean rank of the questions in each file was computed. The Kruskal-Wallis H statistic was computed for each prioritization to test the null hypothesis that the mean ranks do not differ across files. The range of the ranks within each file was also computed in order to determine the relative spread of the priority rankings within files. The mean ranks for each file were ranked within each prioritization and compared across prioritizations to determine the consistency of importance of files across levels and uses.

A Spearman rank order correlation matrix was computed for twenty-one of the twenty-eight priorizations (three levels by six use categories plus the mean by use category over the three levels). This intercorrelation matrix was factor analyzed by the principal component extraction method and rotated according to the Varimax criterion.

RESULTS

Question Prioritizations

The prioritizations of questions for each of the twenty-eight combinations are presented in Tables 1-28 in Appendix C, where tables are numbered consecutively. Pages of a given table are numbered consecutively within tables. Thus, Table 6-14 indicates the 14th page of Table 6. The organization of the tables is shown in Figure 4. As indicated, Table 1 contains the prioritization of questions according to overall mean similarity index; Tables 2 through 7, the prioritization of questions according to mean similarity index computed over levels; Tables 8 through 10, the prioritization of questions according to mean similarity index computed over uses, and Tables 11 through 28, the prioritization of questions according to the similarity index computed for specific combinations of level and use.

Each table contains the TEXT of the questions as they appeared in the Classification document, the computed SIMILARITY INDEX for each question, the RANK of the question according to descending order of the similarity index, the FILE number in which the question appeared and the QUESTION number within the file. In those cases where several questions have equal values of the similarity index, the median rank is assigned to each of the questions having tied values. For example, in Tables 7 through 22, the eleven (11) questions following the question ranked 312 are tied. Since the median of the ranks 313 to 323 is 318, this rank is assigned to all tied questions.

The reader may well wonder upon examination of the tables why certain questions appear to be repeated. The reason is that certain questions appear in more than one file in the structure of the Classi-

Figure 4. Layout of Similarity Index Tables

fication document; e.g., the question "How is the curriculum identified?" appears in Files 2, 3, and 4 and a similarily worded question in File 1. The rationale for multiple inclusion is that for completeness of coverage in the Classification document it was considered necessary to identify the curriculum when referring to: instructional characteristics (File 1), expenditures by activity (File 2), expenditures by local assignments, (File 3), and expenditures by object (File 4). Similar arguments hold for the necessity for multiple file inclusion of the identification of students, schools and local education agencies.

For definition of key terms in the question, the reader is referred to Volume III which is a Lexicon of all terms used in the Classification document.

Tables 1 through 28 provide a voluminous source of data on the prioritization of vocational education informational needs according to the level of the users and the use for which the information is required. For example, from Table 1, we note that for all levels and uses combined, the most important question is "How is the curriculum identified within a school?"; the next most important question is "What is the time schedule for the curriculum?"; the third most important is "What is the curriculum enrollment?" Conversely, the three least important questions are "What are the characteristics of other equipment required for vocational education at the state level?"; "How much of the area of each building is used for circulation areas in and between buildings?" and "What are the characteristics of the small tools and small equipment used in vocational education at the state site?"

Further examination of Table 1 indicates that questions dealing with curriculum or students account for 23 of the top 25 questions. Of the twenty-five bottom ranked questions, all but two deal with characteristics of the state and the state educational agency.

As might be expected, priorities differ according to use. When prioritized according to the mean similarity index across levels, "How is the curriculum identified within a school?" is the most important question for planning (Table 2); "What is the time schedule for the curriculum?" is the most important question for operations (Table 3); "What are the completion requirements for the curriculum?" is the most important question for evaluation (Table 4); "What are the curriculum expenditures?" the most important question for finance and budgeting (Table 5); "How is the curriculum identified within a school?" is the most important question for reporting requirements (Table 6); and "What are the entrance requirements for the curriculum?" the most important question for public information (Table 7). It is interesting to note that all of the above questions deal with curriculum.

Priorities were also found to differ by use and level of users. For example, the highest priority question for planning at the national level is "What are the related occupations for which training is provided in the curriculum?"; the highest priority question for planning at the state level is "What is the total state expenditure for vocational education?"; and the top priority question for planning at the local level is "What is the time schedule for the curriculum?"

Because files represent a topical organization of questions, they provide a convenient means of summarizing and interpreting the twenty-eight (28) priority rankings of questions presented in Tables 1 through 28. For each of the prioritizations, the following statistics were computed: (1) the mean rank of questions within each file; (2) the minimum rank and the maximum rank for questions within each file; (3) the range of the ranks within each file; (4) the rank order of the files in descending order according to the mean rank of each file; and (5) the Kruskal-Wallis H statistic which tests the hypothesis that the files do not differ according to mean importance of questions.

The topical question of each file and the number of questions in each file, N, is given below:

FILE 1: WHAT ARE THE CURRICULUM AND INSTRUCTIONAL CHARACTERISTICS? N = 31

FILE 2: WHAT ARE THE CURRICULUM EXPENDITURES BY ACTIVITIES? N = 9

FILE 3: WHAT ARE THE VOCATIONAL CURRICULUM EXPENDITURES BY LOCAL ASSIGNMENTS? N = 9

FILE 4: WHAT ARE THE VOCATIONAL CURRICULUM EXPENDITURES BY OBJECT? N = 9

FILE 5: WHAT ARE THE VOCATIONAL STUDENT CHARACTERISTICS? N = 24

FILE 6: WHAT ARE THE CHARACTERISTICS OF THE VOCATIONAL COMPLETER/EARLY LEAVER? N = 13

FILE 7: WHAT ARE THE LOCAL EDUCATIONAL AGENCY VOCATIONAL STAFF MEMBER CHARACTERISTICS? N = 23

FILE 8: WHAT ARE THE LOCAL EDUCATION AGENCY VOCATIONAL PROPERTY CHARACTERISTICS? N = 25

FILE 9: WHAT ARE THE LOCAL SCHOOL CHARACTERISTICS? N = 31

FILE 10: WHAT ARE THE LOCAL AGENCY CHARACTERISTICS? N = 25

FILE 11: WHAT ARE THE CHARACTERISTICS OF THE LOCAL EDUCATION AGENCY VOCATIONAL SERVICE AREA? N = 15

FILE 12: WHAT ARE THE VOCATIONAL EDUCATION CHARACTERISTICS OF THE STATE EDUCATION AGENCY? N = 19

FILE 13: WHAT ARE THE STATE EDUCATION AGENCY VOCATIONAL EXPENDITURES BY ACTIVITIES? N = 12

FILE 14: WHAT ARE THE STATE EDUCATION AGENCY VOCATIONAL EXPENDITURES BY ASSIGNMENT? N = 7

FILE 15: WHAT ARE THE STATE EDUCATION AGENCY VOCATIONAL EXPENDITURES BY OBJECT? N = 11

FILE 16: WHAT ARE THE STATE EDUCATION AGENCY VOCATIONAL STAFF CHARACTERISTICS? N = 24

FILE 17: WHAT ARE THE STATE EDUCATION AGENCY VOCATIONAL PROPERTY CHARACTERISTICS? N = 20

FILE 18: WHAT ARE THE GENERAL CHARACTERISTICS OF THE STATE? N = 15

Analysis of Table 1: Uses and Levels Combined

The analysis of Table 1 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	47.4	1	1	155	154
2	145.0	7	9	300	291
3	168.0	11	20	295	275
4	127.2	6	24	266	242
5	114.2	4	22	269	247
6	102.0	3	10	209	199
7	152.0	8	49	261	212
8	212.1	14	102	303	201
9	100.5	2	11	242	231
10	153.8	9	31	275	244
11	165.1	10	52	296	244
12	123.7	5	28	289	261
13	186.8	12	89	302	213
14	245.7	16	210	313	103
15	194.4	13	108	287	179
16	267.6	17	216	304	88
17	311.9	18	291	323	32
18	224.7	15	171	305	134

H = 181.25, significant at .0001 level

The H statistic is highly significant indicating that it is highly unlikely that the mean ranks are equal for all files. As judged by their rank order, curriculum and instruction characteristics (File 1) is by far the most important file in terms of the relative priority ranking of questions within the file, followed by local school characteristics (File 9), the characteristics of vocational completer/early leaver (File 6), and the characteristics of vocational students (File 5). A comparison of the magnitude of the mean ranks for Files 1, 9 and 6 shows that File 1 has a substantially lower mean rank (higher priority) than Files 9 and 6 whose mean ranks are approximately equal. Characteristics of state agency vocational staff (File 16) and general characteristics of the state vocational property (File 17) are the least important topical areas with mean ranks of 267.6 and 311.9 respectively.

The minimum rank/maximum rank indicates the spread of rankings assigned questions within a file. Thus, for File 1, the highest ranked question of those in the file received a ranking of 1 and the lowest ranked question in the file received a rank of 155 giving the range of 154. File 1 questions, then, tend to be confined to the upper end of the prioritized ranking. In contrast, File 14, File 16, and File 17 are confined to the bottom end of the prioritization ranking. The highest ranked question in File 17, for instance, was ranked 291st in order of priority and the lowest ranked was ranked 323rd, giving a range of 32 between the highest and lowest ranked question.

Analysis of Table 2: Planning, All Levels Combined

The analysis of Table 2 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	56.5	1	1	261	260
2	166.4	10	21	317	296
3	190.9	12	46	311	265
4	140.2	8	23	283	260
5	138.7	7	14	302	288
6	115.4	5	24	218	194
7	198.9	13	98	312	214
8	214.2	15	95	290	195
9	111.8	3	18	230	212
10	163.0	9	47	275	228
11	89.5	2	6	266	260
12	118.5	6	25	284	259
13	175.8	11	79	296	217
14	226.9	16	160	318	158
15	202.8	14	111	287	176
16	260.6	17	176	299.5	123.5
17	310.0	18	292	322.5	30.5
18	112.1	4	28	282	254

H = 166.2, significant at .0001 level

The H statistic was highly significant. When ranked according to the mean similarity index across levels for planning, curriculum and instructional characteristics was the most important topical area, followed by characteristics of the local education agency service area, characteristics of the local schools and characteristics of the state. State agency vocational staff and property characteristics were the least important areas.

Analysis of Table 3: Operations, All Levels Combined

The analysis of Table 3 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	57.9	1	1	256	255
2	152.1	7	49	283	234
3	166.4	9	20	301	281
4	125.2	5	12	277	265
5	109.1	3	18	297	279
6	242.4	15	142	315	173
7	111.4	4	14	275	261
8	153.1	8	31	309	278
9	101.1	2	11	271	260
10	148.8	6	43	279	236
11	206.5	14	93	302	209
12	190.0	11	64	307	243
13	199.2	12	119	304	185
14	257.7	17	169	317	148
15	181.5	10	78	296	218
16	204.8	13	98	287.5	189.5
17	297.1	18	238	322.5	84.5
18	244.0	16	151	320	169

H = 151.6, significant at .0001 level

With respect to operations, the four most important topical areas are curriculum and instructional characteristics, local school characteristics, student characteristics, and local education agency vocational staff characteristics. The lowest priority areas were state education agency vocational expenditures by assignment and state education agency property characteristics.

Analysis of Table 4: Evaluation, All Levels Combined

The analysis of Table 4 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	50.7	2	1	264	263
2	153.0	7	46	282	236
3	191.9	11	68	294	226
4	188.3	10	89	292	203
5	93.1	3	15	198	183
6	28.2	1	5	73	68
7	122.7	5	25	268	243
8	210.9	13	132	298	166
9	95.1	4	29	220	191
10	150.2	6	50	248	198
11	178.5	9	76	280	204
12	154.2	8	48	233	185
13	197.0	12	96	287	191
14	256.6	16	196	307	111
15	272.5	17	241	311	70
16	256.2	15	180	309	129
17	309.7	18	276	320	44
18	223.7	14	148	274	126

H = 219.1, significant at .0001 level

For the evaluation use category the most important areas are characteristics of vocational completer/early leaver, curriculum and instructional characteristics, vocational student characteristics, and local school characteristics. The low mean rank for File 6 and the narrow range indicates the high priority placed on the need for follow-up information in the evaluation of vocational education. State education vocational expenditures by object and state vocational property characteristics are the least needed information for evaluation.

Analysis of Table 5: Finance and Budgeting, All Levels Combined

The analysis of Table 5 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	125.0	7	1	264	263
2	88.1	4	3	249	246
3	86.1	3	12	217	205
4	41.9	1	4	115	111
5	207.0	14	42	315	273
6	281.0	17	220	319	99
7	127.7	8	43	241	198
8	148.3	11	31	281	250
9	146.4	10	13	304	291
10	133.4	9	14	267	253
11	190.5	13	92	280	188
12	121.4	6	21	307	286
13	103.8	5	56	260	204
14	154.0	12	84	300	216
15	78.8	2	27	172	145
16	212.6	15	133	310	177
17	288.9	18	210	322.5	112.5
18	261.5	16	216	313	97

H = 144.6, significant at .0001 level

With respect to finance and budgeting, the most important files are curriculum expenditures by object (File 4), state educational agency vocational expenditures by object (File 15), vocational curriculum expenditures by local assignments (File 3), vocational curriculum expenditures by activities (File 2), state education agency vocational expenditures by activities (File 13). It is interesting to note that whereas vocational curricular expenditures by local assignments was the third most important file, state education agency vocational expenditures by assignment was 12th in order of importance. The least important information for finance and budgeting purposes are characteristics of vocational completer/early leaver (File 6) and characteristics of state education agency vocational property (File 17).

Analysis of Table 6: Reporting Requirements, All Levels Combined

The analysis of Table 6 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	121.4	5	1	273	272
2	167.0	11	20	303	283
3	163.1	10	17	280	263
4	140.6	8	37	230	193
5	94.7	1	4	265	261
6	118.5	4	2	260	258
7	123.8	6	30	276	246
8	192.6	14	69	300	231
9	103.1	3	7	258	251
10	131.8	7	22	268	246
11	186.8	13	46	290	244
12	100.9	2	12	241	229
13	186.3	12	92	297	205
14	216.7	15	118	306	188
15	145.4	9	71	253	182
16	263.2	17	198	308.5	110.5
17	308.3	18	261	317	56
18	247.2	16	112	308.5	196.5

H = 146.2, significant at .0001 level

For the reporting requirements use category, the most important topical areas are student characteristics (File 5), the vocational education characteristics of the state education agency (File 12), local school characteristics (File 9), characteristics of vocational completer/early leaver (File 6), and characteristics of vocational curriculum and instruction (File 1). Characteristics of state education agency vocational staff (File 16) and vocational education property (File 17) are the least important.

Analysis of Table 7: Public Information, All Levels Combined

The analysis of Table 7 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	64.1	2	1	204	203
2	169.3	10	42	266	224
3	181.6	11	71	261	190
4	210.2	12	145	300	155
5	101.2	5	13	209	196
6	47.1	1	8	110	102
7	231.5	14	115	310	195
8	244.5	16	107	305	198
9	86.8	3	6	250	244
10	146.2	7	68	253	185
11	136.6	6	12	281	269
12	94.8	4	34	225	191
13	162.2	9	76	237	161
14	231.8	15	171	279	108
15	213.9	13	147	291	144
16	258.8	17	167	318	151
17	298.5	18	148	318	170
18	160.7	8	57	259	202

H = 207.0, significant at .0001 level

The most important files for public information are characteristics of vocational completer/early leaver (File 6), vocational curriculum and instructional characteristics (File 1), local school characteristics (File 9), vocational education characteristics of the state education agency (File 12), and vocational student characteristics (File 5). As before, the least important files are 16 and 17.

Analysis of Table 8: National Level, All Uses Combined

The analysis of Table 8 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	55.8	2	1	180	179
2	174.6	10	26	278	252
3	182.4	11	74	258	184
4	207.9	13	130	294	164
5	78.0	3	11	235	224
6	54.2	1	5	100	95
7	149.1	6	30	264	234
8	216.6	15	108	303	195
9	125.6	5	12	270	258
10	199.3	12	91	300	209
11	172.5	9	65	284	219
12	104.9	4	20	261	241
13	152.4	8	45	277	232
14	211.3	14	159	286	127
15	231.1	16	151	297	146
16	260.1	17	170	313	143
17	310.4	18	275	323	48
18	150.4	7	57	249	192

H = 190.8, significant at .0001 level

The most important informational area for national users is characteristics of vocational completer/early leaver (File 6), followed by the characteristics of vocational curriculum and instruction (File 1), characteristics of the vocational student (File 5), vocational education characteristics of the state (File 12), and local school characteristics (File 9). Again, Files 16 and 17 are the least important files.

Analysis of Table 9: State Level, All Uses Combined

The analysis of Table 9 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	76.8	1	1	226.5	225.5
2	138.7	7	5	319	314
3	172.7	11	10	313	303
4	125.7	6	33	236	203
5	163.3	8	23	311	288
6	176.4	12	25	279	254
7	188.1	14	72	319	247
8	256.0	17	152	319	167
9	124.5	5	17	263	246
10	171.1	10	22	319	297
11	193.9	15	68.5	319	250.5
12	82.6	2	4	277	273
13	113.1	4	41	319	278
14	180.4	13	83	319	236
15	87.2	3	15	237.5	222.5
16	170.5	9	64	245.5	181.5
17	285.3	18	226.5	319	92.5
18	194.2	16	95	314	219

H = 123.4, significant at .0001 level

The most important informational area for state level uses is vocational curriculum and instruction (File 1), vocational education characteristics of the state education agency (File 12), state education agency vocational expenditures by object (File 15), state education agency vocational expenditures by activities (File 13), and local school characteristics (File 9). Least important for state use are local educational agency vocational property characteristics (File 8) and state education agency vocational property characteristics (File 17).

Analysis of Table 10: Local Level, All Uses Combined

The analysis of Table 10 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	46.4	1	1	170	169
2	127.1	7	12	256	244
3	147.9	10	29	259	230
4	103.0	4	8	240	232
5	116.2	5	19	225	206
6	93.5	3	20	180	160
7	134.7	8	57	208	151
8	153.3	11	46	227	181
9	90.2	2	10	217	207
10	121.1	6	21	226	205
11	138.0	9	36	239	203
12	207.1	12	154	261.5	107.5
13	246.5	13	203	301.5	98.5
14	271.0	16	233.5	301.5	68
15	250.9	14	229	278	49
16	300.6	18	279	301.5	22.5
17	299.0	17	276	301.5	25.5
18	253.5	15	224	274	50

H = 235.9, significant at .0001 level

The most important informational areas for local use are vocational curriculum and instructional characteristics (File 1), local school characteristics (File 9), characteristics of vocational completer/early leaver (File 6), vocational curriculum expenditures by object (File 4), and characteristics of vocational students (File 5). Although Files 16 and 17 received the lowest priority, all state related files (12-18) tended to receive low priorities for local usage. The highest rank that any state related question received for combined uses at the local level was 154.

Analysis of Table 11: Planning, National Level

The analysis of Table 11 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	73.9	2	1	237	236
2	181.0	11	45	291	246
3	168.7	9	57	270	213
4	179.8	10	71	255.5	184.5
5	100.0	4	4	275	271
6	72.5	1	11	189	178
7	195.9	12	62.5	298	235.5
8	228.6	15	130	318	188
9	149.2	7	6	262.5	256.5
10	197.5	14	106	299.5	193.5
11	108.4	5	15	231	216
12	115.4	6	23	255.5	232.5
13	168.0	8	44	265	221
14	196.7	13	98.5	280	181.5
15	237.4	17	136	292	156
16	231.5	16	91	310	219
17	311.1	18	297	318	21
18	91.5	3	22	229	207

H = 167.8, significant at .0001 level

The most important informational areas for planning by national users are characteristics of completer/early leaver (File 6), vocational curriculum and instructional characteristics (File 1), general characteristics of the state (File 18), characteristics of vocational students (File 5), and characteristics of the local education agency service area. The least important are state educational agency vocational expenditures by object (File 15) and state education agency vocational property characteristics (File 17).

Analysis of Table 12: Operations, National Level

The analysis of Table 12 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	87.1	3	1	294	293
2	182.0	9	94	272	178
3	135.4	6	49	224	175
4	149.9	7	71	210	139
5	57.2	1	4	154	150
6	206.2	12	80	311	231
7	79.4	2	5	239.5	234.5
8	123.5	5	42	321	279
9	105.7	4	17	274.5	257.5
10	212.0	14	32	321	289
11	214.3	15	90	312	222
12	205.7	11	62	314	252
13	197.9	10	115	300	185
14	220.2	16	94	260	166
15	210.1	13	131	260	129
16	256.6	17	196.5	314	117.5
17	285.9	18	116	321	205
18	172.7	8	68	309	241

H = 172.5, significant at .0001 level

The most important informational area for operations as judged by national users is characteristics of vocational students (File 5), characteristics of local education agency staff members (File 7), characteristics of vocational curriculum and instruction (File 1), local school characteristics (File 9), and local education agency vocational property characteristics (File 8). Files 16 and 17 are the least important files.

Analysis of Table 13: Evaluation, National Level

The analysis of Table 13 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	61.3	2	1	249.5	248.5
2	194.2	11	71	298	227
3	229.4	14	88	298	210
4	235.3	16	133	316.5	183.5
5	70.3	3	7	230	223
6	27.8	1	4	65	61
7	128.7	5	15	285.5	270.5
8	209.1	12	90	316.5	226.5
9	120.2	4	8	276	268
10	184.1	9	91	262	171
11	168.8	7	63	277	214
12	135.3	6	67	214	147
13	179.4	8	52	283	231
14	211.8	13	138	290.5	152.5
15	258.5	17	211	300	89
16	230.0	15	104	316.5	212.5
17	298.1	18	226	316.5	90.5
18	186.4	10	62	261	199

H = 187.2, significant at .0001 level

The most important informational areas for evaluation are characteristics of the vocational completer/early leaver (File 6), curriculum and instructional characteristics (File 1), student characteristics (File 5), local school characteristics (File 9) and local education agency vocational staff member characteristics (File 7). The emphasis on student follow-up information is apparent from the low mean rank and narrow range for questions in File 6. Least important information is state education agency vocational expenditures by object (File 15) and state agency vocational property characteristics (File 17).

Analysis of Table 14: Finance and Budgeting, National Level

The analysis of Table 14 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	120.0	9	1	297	296
2	68.3	2	6	149.5	143.5
3	65.3	1	12	116	104
4	73.6	3	7	172	165
5	238.4	15	126	293	167
6	257.1	17	200	288	88
7	105.2	7	34	178.5	144.5
8	101.8	6	23	311.5	288.5
9	182.4	13	8	311.5	303.5
10	163.8	11	15	311.5	296.5
11	222.3	14	20.5	293	272.5
12	105.4	8	5	270.5	265.5
13	94.4	5	32	164	132
14	124.1	10	84	149.5	65.5
15	90.4	4	37.5	149.5	112
16	279.4	18	184.5	311.5	127
17	249.8	16	194	311.5	117.5
18	179.1	12	78	243.5	165.5

H = 167.0, significant at .0001 level

The most important files are vocational curriculum expenditures by local assignment (File 3), closely followed by vocational curriculum expenditures by activities (File 2), vocational curriculum expenditures by object (File 4), state education agency vocational expenditures by object (File 15), and state agency vocational expenditures by activities (File 13). Least important for finance and budgeting use are characteristics of vocational completer/early leaver (File 6) and state education agency vocational staff characteristics (File 16).

Analysis of Table 15: Reporting Requirements, National Level

The analysis of Table 15 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	106.1	4	2	288	286
2	197.7	13	68	301	233
3	181.3	10	40.5	260	219.5
4	230.9	16	54	313	259
5	80.6	2	4	239	235
6	88.5	3	24	178	154
7	114.1	5	35	272	237
8	196.2	12	45	313	268
9	141.8	7	25	268	243
10	169.9	9	21	275	254
11	167.6	8	74	287	213
12	74.9	1	1	215.5	214.5
13	129.3	6	17	299	282.0
14	224.1	15	143	286	143
15	200.6	14	57	301	244
16	251.9	17	162	313	151
17	301.3	18	260	313	53
18	191.6	11	48	296.5	248.5

H = 147.1, significant at .0001 level

The most important files for reporting purposes as judged by nationally oriented users are vocational education characteristics of the state education agency (File 12), vocatfonal student characteristics (File 5), characteristics of vocational completer/early leaver (File 6), vocational curriculum and instruction characteristics (File 1), and local education agency vocational staff member characteristics (File 7). Files 16 and 17 are least important.

Analysis of Table 16: Public Information, National Level

The analysis of Table 16 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	70.8	2	2	226	224
2	145.8	8	26	216	190
3	172.3	11	120	221	101
4	237.8	16	163	286	123
5	91.7	4	13	251	238
6	41.1	1	1	138	137
7	228.3	15	79	312.5	233.5
8	277.4	17	206.5	312.5	106
9	123.5	7	24	312.5	288.5
10	197.6	12	91	312.5	221.5
11	158.4	9	18	262	244
12	85.5	3	35	230	195
13	119.7	6	40	225	185
14	165.1	10	100	230	130
15	204.6	13	109.5	262	152.5
16	214.8	14	121	312.5	191.5
17	294.8	18	147.5	312.5	165
18	96.6	5	4	213.5	209.5

H = 203.4, significant at .0001 level

For public information use at the national level, the most important file is vocational completer/early leaver (File 6), followed by vocational curriculum and instruction (File 1), vocational education characteristics of the state education agency (File 12), vocational students (File 5), and general characteristics of the state (File 18). Local education agency property characteristics (File 8) and state education agency property characteristics (File 17) are the least important files.

Analysis of Table 17: Planning, State Level

The analysis of Table 17 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	91.3	3	3	313.5	310.5
2	180.2	12	17	313.5	296.5
3	200.5	15	46	313.5	267.5
4	120.6	7	13	221.5	208.5
5	170.2	9	19	313.5	294.5
6	179.3	11	55	273.5	218.5
7	228.1	16	116.5	313.5	197
8	248.5	17	129.5	313.5	184
9	141.4	8	22	261	239
10	175.4	10	46	313.5	267.5
11	96.5	4	5	313.5	308.5
12	83.9	2	1	254.5	253.5
13	113.4	5	49.5	313.5	264
14	183.3	13	88.5	313.5	225
15	117.2	6	30	221.5	191.5
16	196.4	14	70	261	191
17	275.4	18	221.5	313.5	92
18	64.9	1	2	303	301

H = 132.8, significant at .0001 level

The most important information for state level planning is general characteristics of the state (File 18), followed by vocational education characteristics of the state (File 12), vocational curriculum and instructional characteristics (File 1), characteristics of the local education agency vocational service area (File 11), and state education agency vocational expenditures by activity (File 13). The least important for state planning use are local education vocational property characteristics (File 8), and state education agency vocational property charactertics (File 17). The large range for many of the files indicates considerable variability of priority ranking assigned to questions with files.

Analysis of Table 18: Operations, State Level

The analysis of Table 18 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	93.7	3	1	303	302
2	158.4	8	73	303	230
3	196.8	14	42	303	261
4	151.7	6	35	229.5	194.5
5	167.1	10	37.5	303	265.5
6	295.8	18	248	303	55
7	175.3	12	23	303	280
8	242.4	17	79	303	224
9	154.6	7	15	303	288
10	161.7	9	42	303	261
11	220.4	16	79	303	224
12	135.3	5	18	303	285
13	117.5	4	34	303	269
14	186.8	13	46	303	257
15	91.8	2	7.5	274.5	267
16	56.9	1	5	166	161
17	219.2	15	79	303	224
18	170.5	11	37.5	303	265.5

H = 118.8, significant at .0001 level

The most important informational areas for state operations use are state educational agency vocational staff characteristics (File 16), state education agency vocational expenditures by object (File 15), vocational curriculum and instructional characteristics (File 1), state education agency vocational expenditures by activities (File 13), and vocational education characteristics of the state education agency (File 12). Characteristics of local education agency property (File 17) and characteristics of vocational completer/early leaver (File 6) are the least important areas for state operational use.

Analysis of Table 19: Evaluation, State Level

The analysis of Table 19 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	57.2	2	1	232	231
2	124.0	4	19	286.5	267.5
3	168.9	10	62.5	286.5	224
4	221.6	13	97	286.5	189.5
5	152.5	8	31.5	286.5	255
6	39.6	1	5	90.5	85.5
7	145.3	6	20.5	286.5	266
8	238.2	14	126	286.5	160.5
9	89.9	3	13	162.5	149.5

18	247.3	15	162.5	286.5	124

H = 171.6, significant at .0001 level

The most important information for state evaluation is characteristics of vocational completer/early leaver (File 6), followed by characteristics of vocational curriculum and instruction (File 1), local school characteristics (File 9), vocational curriculum expenditures by activities (File 2), and vocational education characteristics of the state education agency (File 12). State education agency vocational expenditures by assignment (File 14) and state education agency vocational property characteristics (File 17) are least important.

Analysis of Table 20: Finance and Budgeting, State Level

The analysis of Table 20 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	135.8	9	6	299.5	293.5
2	103.6	4	1	299.5	298.5
3	113.0	5	10.5	299.5	289
4	65.1	2	4.5	158	153.5
5	188.9	13	36.5	299.5	263
6	282.8	18	185	299.5	114.5
7	174.5	12	73	299.5	226.5
8	207.3	15	67	299.5	232.5
9	164.4	11	23	299.5	276.5
10	158.6	10	19	299.5	280.5
11	199.3	14	90	299.5	209.5
12	114.6	6	12	299.5	287.5
13	81.9	3	30.5	299.5	269
14	116.9	7	42	299.5	257.5
15	48.2	1	2.5	125.5	123
16	124.8	8	48.5	248	199.5
17	231.9	16	113.5	299.5	186
18	252.6	17	186	299.5	113.5

H = 111.5, significant at .0001 level

For finance and budgeting at the state level, state education agency vocational expenditures by object (File 15), vocational curriculum expenditures by object (File 4), state educational agency vocational expenditures by activities (File 13), vocational curriculum expenditures by activity (File 2), and vocational curriculum expenditures by local assignment (File 3) are the most important areas. The least important information for finance and budgetary use pertains to general characteristics of the state (File 18) and characteristics of vocational completer/early leaver (File 6).

Analysis of Table 21: Reporting Requirements, State Level

The analysis of Table 21 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	154.6	10	1	303	302
2	152.3	9	19	303	284
3	157.8	12	23	303	280
4	121.4	4	56.5	190	133.5
5	140.1	5	9	303	294
6	172.4	13	8	303	295
7	145.8	7	15	303	288
8	203.9	14.5	96	303	207
9	111.3	3	3	303	300
10	142.7	6	20.5	303	282.5
11	220.4	17	80.5	303	222.5
12	78.9	2	2	205.5	203.5
13	151.7	8	66	303	237
14	157.0	11	49	303	254
15	72.4	1	33	174	141
16	203.9	14.5	96	303	207
17	289.3	18	205.5	303	97.5
18	215.7	16	72	303	231

H = 97.6, significant at .0001 level

The most important files for state level reporting are state education agency vocational expenditures by object (File 15), vocational education characteristics of the state education agency (File 12), local school characteristics (File 9), vocational curriculum expenditures by object (File 4), and vocational student characteristics (File 5). Characteristics of local education agency vocational service areas (File 11), and state education vocational property characteristics (File 17) are the least important files for state reporting.

Analysis of Table 22: Public Information, State Level

The analysis of Table 22 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	76.5	2	1	256.5	255.5
2	195.8	11	110	256.5	146.5
3	216.4	14	101	256.5	155.5
4	204.0	13	69	256.5	187.5
5	118.0	5	2	256.5	254.5
6	58.4	1	10.5	127.5	117
7	237.9	16	87	256.5	169.5
8	245.1	18	161.5	256.5	95
9	104.9	3	3	256.5	253.5
10	171.5	8	30	256.5	226.5
11	152.0	7	39.5	256.5	217
12	109.0	4	12.5	256.5	244
13	139.0	6	35	256.5	221.5
14	238.1	17	127.5	256.5	129
15	181.3	10	61	256.5	195.5
16	196.8	12	79	256.5	177.5
17	227.9	15	38	256.5	218.5
18	173.1	9	72	256.5	184.5

H = 126.1, significant at .0001 level

The most important files for state level public information usage are the characteristics of vocational completer/early leaver (File 6), characteristics of vocational curriculum and instruction (File 1), characteristics of local schools (File 9), vocational education characteristics of the state education agency (File 12), and the characteristics of vocational students (File 5). The least important information for state public information usage deals with state education agency vocational expenditures by assignment (File 14) and local education agency property characteristics (File 8).

Analysis of Table 23: Planning, Local Level

The analysis of Table 23 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	46.3	1	1	222	221
2	135.8	6	31	270.5	239.5
3	176.5	11	58	274	216
4	138.8	8	19	275	256
5	143.4	9	22	272.5	250.5
6	97.9	4	10	201	191
7	148.3	10	33	252	219
8	138.7	7	25	218	193
9	95.8	3	20	208	188
10	123.6	5	40	219.5	179.5
11	90.4	2	12	195.5	183.5
12	187.2	12	115	256	141
13	241.9	14	181.5	299.5	118
14	266.2	16	231	299.5	68.5
15	250.0	15	210.5	299.5	89
16	299.5	17.5	299.5	299.5	0
17	299.5	17.5	299.5	299.5	0
18	228.7	13	187.5	269	81.5

H_c = 218.6, significant at .0001 level

With regard to planning at the local level, the most important information concerns characteristics of vocational curriculum and instruction (File 1), characteristics of the local education agency vocational service area (File 11), characteristics of the local school (File 9), characteristics of vocational completer/early leaver (File 6), and characteristics of the local education agency (File 10). The least important files deal with characteristics of state education agency vocational staff (File 16) and state education agency property characteristics (File 17). The relatively low priority assigned by local users to state level information is indicated by the high mean rank and narrow range assigned to Files 12-18 which are concerned with state level information.

Analysis of Table 24: Operations, Local Level

The analysis of Table 24 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	53.7	1	1	180	179
2	131.4	7	18	242	224
3	140.4	9	27	256.5	229.5
4	107.8	5	5	253	248
5	121.1	6	21	266.5	245.5
6	162.2	11	81	259	178
7	106.7	4	33	189	156
8	104.6	3	22	252	230
9	94.1	2	11	199	188
10	132.1	8	16	[illegible]	216
11	161.2	10	37	248	211
12	210.4	12	172	256.5	84.5
13	234.1	13	178	299.5	121.5
14	264.7	15	222.5	299.5	77
15	239.7	14	222.5	272	49.5
16	299.5	18	299.5	299.5	0
17	296.2	17	266.5	299.5	33
18	266.0	16	232	299.5	67.5

H = 227.7, significant at .0001 level

For use in program operations, local users assigned the most importance to vocational curriculum and instruction (File 1), local school characteristics (File 9), local education agency vocational property characteristics (File 8), local education agency vocational staff member characteristics (File 7), and vocational curriculum expenditures by object (File 4). Least importance was assigned to state education agency vocational property (File 17) and staff (File 16) characteristics.

Analysis of Table 25: Evaluation, Local Level

The analysis of Table 25 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	56.2	2	1	251	250
2	142.6	8	58	261.5	203.5
3	163.4	9	110	261.5	151.5
4	127.7	6	39.5	248	208.5
5	94.2	3	5	272	267
6	34.2	1	13	75	62
7	113.9	5	25	200	175
8	175.2	11	102	244	142
9	97.9	4	29	230.5	201.5
10	127.9	7	33	261.5	228.5
11	167.0	10	72	249.5	177.5
12	214.8	12	168	261.5	93.5
13	235.9	14	180	299.5	119.5
14	270.1	16	222.5	299.5	77
15	261.4	15	222.5	299.5	77
16	298.4	17	273.5	299.5	26
17	299.5	18	299.5	299.5	0
18	220.8	13	184	261.5	77.5

H = 239.4, significant at .0001 level

For evaluation, local users indicated a prioritized need for information pertaining to characteristics of vocational completer/early leaver (File 6), vocational curriculum and instruction (File 2), vocational student (File 5), local school (File 8), and characteristics of the local education agency vocational staff member (File 7). The least need was expressed for state education agency vocational staff (File 16) and property (File 17) characteristics.

Analysis of Table 26: Finance and Budgeting, Local Level

The analysis of Table 26 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	111.1	8	1	261	260
2	85.6	2	7	204.5	197.5
3	93.5	3	11	204.5	193.5
4	35.5	1	2	107	105
5	181.8	11	22	271	249
6	213.9	12	154	272	118
7	98.1	5	19	263	244
8	104.7	7	17	204.5	187.5
9	104.5	6	12.5	245.5	233
10	94.2	4	12.5	191	178.5
11	137.7	9	57.5	241.5	184
12	168.7	10	67	252	185
13	225.4	14	141.5	299	157.5
14	266.5	16	204.5	299	94.5
15	223.3	13	175.5	268	92.5
16	299.0	17.5	299	299	0
17	299.0	17.5	299	299	0
18	246.9	15	186	299	113

H = 214.1, significant at .0001 level

For use in finance and budgeting, local users expressed a need for information concerning vocational curriculum expenditures by object (File 4), vocational curriculum expenditures by activities (File 2), local vocational curriculum expenditures by local assignments (File 3), local education agency characteristics (File 10), and local education agency vocational staff member characteristics (File 7). Least required was information pertaining to state agency property and staff characteristics (Files 16 and 17).

Analysis of Table 27: Reporting Requirements, Local Level

The analysis of Table 27 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	103.2	4	9	230	221
2	159.7	11	34	246.5	212.5
3	142.0	9	24	207.5	183.5
4	116.6	7	30	233	203
5	69.6	1	3	212	209
6	81.5	2	1	194	193
7	115.9	6	31	204	173
8	153.7	10	55	263	208
9	92.2	3	11	237	226
10	109.3	5	20.5	207.5	187
11	138.2	8	23	232	209
12	198.6	12	123.5	246.5	123
13	246.5	14	186	297	111
14	271.9	16	246.5	297	50.5
15	244.4	13	217	297	80
16	297.0	18	297	297	0
17	295.1	17	259.5	297	37.5
18	268.9	15	231	297	66

H = 222.5, significant at .0001 level

The most important information for local use to meet reporting requirements is characteristics of vocational students (File 5), characteristics of vocational completer/early leaver (File 6), local school characteristics (File 9), vocational curriculum and instructional characteristics (File 1), and local education agency characteristics (File 10). Typically, information dealing with state education agency staff and property characteristics (Files 16 and 17) are considered the least important.

Analysis of Table 28: Public Information, Local Level

The analysis of Table 28 is as follows:

File	Mean Rank	Rank by Mean Rank	Minimum Rank	Maximum Rank	Range
1	68.4	1	1	205	204
2	158.5	9	17	261.5	244.5
3	158.0	8	22	247.5	225.5
4	161.4	10	49	256	207
5	140.9	7	27	293.5	266.5
6	87.9	4	35	145	110
7	201.6	12	91	293.5	202.5
8	170.6	11	28	253	225
9	76.5	2	8	193	185
10	87.5	3	24	218.5	194.5
11	105.4	5	7	261.5	254.5
12	130.7	6	41	218.5	177.5
13	231.8	14	150	293.5	143.5
14	272.1	16	218.5	293.5	75
15	225.3	13	218.5	293.5	75
16	293.5	18	293.5	293.5	0
17	291.9	17	261.5	293.5	32
18	244.2	15	181	293.5	112.5

H = 213.8, significant at .0001 level

Local users regard information about vocational curriculum and instructional characteristics (File 1) as the most important for public information use, followed by characteristics of the local school (File 9), characteristics of the local education agency (File 10), characteristics of vocational completer/early leaver (File 6), and characteristics of the local education vocational service area (File 11). As usual, the least important information concerns characteristics of state education agency vocational staff and property (Files 16 and 17).

The foregoing has dealt with an analysis of relative importance of the files for each of the twenty-eight (28) combinations of levels and uses. As revealed by the separate analyses the importance of files varies from table to table. In order to facilitate comparison of the relative importance of the files across tables, the rankings of the files drawn from the analysis of each of the preceding tables is presented in Table A, where the rows represent the eighteen (18) files and the columns represent the twenty-eight (28) data tables presented in Appendix C. Tables 1 through 28 are divided into six categories: All Uses Combined (Table 1), All Levels Combined (Tables 2 through 7), All Uses Combined (Tables 8 through 10), Uses - National Level (Tables 11 through 16), Uses - State Level (Tables 17 through 22), and Uses - Local Level (Tables 23 through 28). Files are divided into four categories according to content orientation: files 1-4 deal with curriculum information, files 5-6 deal with student information, files 7-11 deal with local education agency information and files 12-18 deal with information on the state education agency as it pertains to vocational education.

All Levels Combined. Analysis of the results in Table A indicate that for all levels combined, instructional and curriculum characteristics (File 1) is of a high order of importance for all uses except finance and budgeting. Curriculum expenditures (Files 2, 3, 4) as might be expected are of importance mainly for finance and budgeting purposes. Vocational student characteristics is of top importance only for reporting requirements, of major importance for operations and evaluation and of minimal importance for finance and budgeting. Information on voca-

*These numbers refer to analyses of Tables 1-28 presented in Appendix C.

tional completers/early leavers (File 6) is of prime importance for evaluation and public information usage. Information on local education agency staff (File 7) and property characteristics (File 8) are of moderate to low importance across all uses. File 9 (local school characteristics) is of relatively high importance over all uses with the exception of finance and budgeting and is exceeded only by File 1 in overall relative priority. File 10 is of moderate importance across all uses. File 11 (characteristics of local education agency vocational planning areas) is of major importance only for planning. Vocational education characteristics of the state education agency (File 12) is of major importance only for reporting requirements and public information. Files 13-14 are relatively unimportant. File 15 (state education agency vocational expenditures by object) is of relative importance only for finance and budgeting use. Files 16 and 17 are the least important files across all usages. File 18 (general characteristics of the state) is of relative importance only for planning.

All Uses Combined. When all levels of use are combined, national users are seen to have relatively less need for curriculum information than state and local users. However, they have a relatively greater need than either state or local users for student and follow-up information, more need than state users for local information with the exception of local education agency characteristics (File 10) and generally less relative need than state users for state oriented information with the exception of information on the general characteristics of the state (File 18). State users generally place relatively less importance than do local users on curriculum information (Files 1-4), student information (Files 5-6), and local education agency information (Files 7-11). However, state users place relatively more importance than do local users on the state oriented files with the exception of Files 17 and 18.

Some striking differences exist between user levels. For instance, national users regard information on vocational completer/early leaver as of top importance, states regard this as of comparatively low importance. Conversely, state users regard state education agency vocational expenditures by object (File 15) as of comparatively high importance whereas national users regard the information as being of relatively little importance. Likewise, state users regard vocational education characteristics of the state education agency (File 12) as of relative high importance while local users tend to regard the information as having substantially less comparative importance.

Uses by Levels. The comparison of national, state and local levels by specific uses reveals considerable differences in the comparative importance of files. For instance, File 6 (completers/early leavers) ranks first in order of priority for national planning and twelfth for state planning. Vocational student characteristics (File 5) rank third for both national and local levels for evaluation and eighth for evaluation at the state level. Similarily, state educational agency vocational staff characteristics (File 16) is ranked first for operations at the state level, 17th at the national level for operations and 18th at the local level for operations.

The relative importance of files for national, state and local level users is depicted in Table B. The entries in Table B are the unweighted means of the ranks from Table A for the various grouping of files and user levels. For example, 8.1 is the mean of the group of ranks

Table B. Mean Ranks by Curriculum, Student, School/LEA and State Characteristics

	Columns 11-16 (National)	Columns 17-22 (State)	Columns 23-28 (Local)
Files 1-4 (Curriculum Characteristics)	8.1	8.0	6.1
Files 5-6 (Student Characteristics)	5.3	9.3	5.9
Files 7-11 (Local Characteristics)	9.4	10.7	6.2
Files 12-18 (State Characteristics)	11.5	9.6	14.8

(2, 3, 2, ... 3, 16, 16) formed by the intersection of Rows 1-4 and columns 11-16 of Table A. Comparison of these means in Table B indicate that local users place more relative importance on files dealing with curriculum characteristics than do either national and/or state level users. National and local users, in contrast, place more emphasis on student characteristics and follow-up information than do state level users. Local users consider characteristics of local schools and education agencies more important than do national users who in turn consider them more important than do state level users. Conversely, state users consider state educational characteristics relatively more important than do national level users who in turn consider them more important than do local level users.

Comparison of Rankings Across Level and Use

The use of files in the preceding analyses while providing a convenient means of synthesizing large amounts of data needs to be supplemented by comparative analysis at the question level. To satisfy this requirement, the priority rankings for all uses combined by levels (obtained from Tables 8 through 10) and the priority rankings for each use by levels (obtained from Tables 11 through 28) is presented for each question in Table 29 located in Appendix C. As in other tables, the pages are numbered consecutively within the table. The questions in Table 29 are presented according to their rank order over all levels and uses combined (Table 1). For each question in Table 29 the following information is presented: the rank (over all uses and levels), the file number containing the question, the question number within the file, the rank by level and use, and the rank for all uses combined identified in Table 29 as TOTAL.

The wide diversity across levels and uses is immediately apparent from an examination of Table 29. For example, Question 1: "How is the curriculum identified within a school?" ranks first for national operations, 27th for state operations, and sixth for local operations. Across uses within a given level, the question ranges in relative importance for national uses from first for operation and total (all uses combined) to 18th for finance. For the state level, this question ranged in relative importance from first for reporting purposes to 31.5 for evaluation. At the local level, the importance of the question ranges from second most important for planning to 62nd most important for finance. Across levels and uses, the question ranges from first to 67th in order of priority.

Such variability across levels and uses is not atypical. The ranks assigned Question 7, page 29-2, for example, vary across levels and uses from first for state public information use to 257th for state reporting use.

Association Between Prioritizations

The variability of priority ranking encountered across levels and uses for a single question led to an analysis of the similarity of the prioritization of all 323 questions across levels and uses. The analysis consisted of computing Spearman rank order correlations between the rankings of the questions for all possible pairings of the twenty-one (21) combinations of uses and levels used in Table 29. As an example, the priority ranking for all questions for national planning use was correlated with the priority ranking for all questions for national operations use, the priority ranking of questions for national planning was correlated with the priority ranking for all questions for national evaluation use, etc. This process was continued until correlations had been computed for every possible pair. The results are presented in Tables 30(a), 30(b), and 30(c) located in Appendix C. Table 30(a) presents the correlations of local uses of information for all possible pairings, Table 30(b) the correlation of state uses of information for all possible pairings and Table 30(c) the national use for all possible pairings.

The Spearman rank order correlation, r_s, measures the association between question priorities for two uses. As such, the coefficient is sensitive to disparities in the priority ranks assigned the same question. If all questions maintained their rank order for both uses, the correlation would be positive unity. If the rankings were perfectly reversed; e.g., the top ranked question on one use was the bottom ranked question for the other use, and so on for all other questions, the correlation would be negative unity. If there was no relation between the ranking for one use and the ranking for the other use, the correlation would be zero.

Thus, the correlation $r_s = .929$ between local-planning and local (over all uses) indicates little disparity in the priority ranking of the questions for use in local planning and their ranking on the basis of over-all use. The correlation $r_s = .011$ between state operations and local finance and budgeting, on the other hand, indicates almost total absence of a relationship between the prioritizations for the two uses.

The correlations in Tables 30(a), 30(b) and 30(c) allow direct comparisons between priority ranking of national, state and local users. From Table 30(a), we note that national priorities were almost universally more similar to local priorities than were state priorities to local priorities. This is judged by the fact that the prioritizations for national uses correlated more highly with the prioritizations for local uses than did state prioritizations in all but four of the forty-nine comparisons. Furthermore, in many instances national correlations with local uses were substantially higher than state correlations; e.g., .614 vs .420, .487 vs .256, .563 vs .263, .330 vs .198, .535 vs .260, .567 vs .378, and .606 vs .346 obtained by comparing the correlations for national-planning with the corresponding correlations for state-planning in Table 30(a).

National priorities tend to correlate more highly with state priorities than do local priorities with state priorities as judged by the comparison of correlations in Table 30(b). Of the 49 correlations between national and state prioritizations, thirty-seven were of greater magnitude than the corresponding correlations between local prioritizations and state prioritizations. The correlations between the prioritizations for national operations and state uses were lower than the correlations between local operations and state uses with the single exception of state operations.

Cluster Analysis

The intercorrelation matrix of uses was cluster analyzed separately for each level to test the hypothesis that uses cluster into groupings that were more similar within than between. The cluster analysis was accomplished by computing and utilizing B-coefficients according to the procedure described by Harmon.[1] Application of the clustering procedure produced the following clusters of uses for each level:

National level	
Cluster I	Planning, Evaluation, Reporting Requirements and Public Information
Cluster II	Operations
Cluster III	Finance and Budgeting
State level	
Cluster I	Planning, Operations, Finance and Budgeting, and Reporting Requirements
Cluster II	Evaluation and Public Information

Local level

Cluster I Planning, Operations, Evaluation, Finance and Budgeting, Reporting Requirements, Public Information

Factor Analysis

The general magnitude of the correlations in Tables 30(a), 30(b) and 30(c) indicates that prioritizations across levels and uses tend to be significantly related. Correlations greater than r_s = .106 were judged to be significantly different from zero at the .05 level. Of the 210 non-duplicative correlations, only eighteen (18) failed to be significant. Nine of the seventeen insignificant correlations involved correlations of state level prioritizations with local level prioritizations, two involved state prioritizations with other state prioritizations, five involved correlations of national with state prioritizations and two involved correlations of national prioritizations with other national prioritizations.

The general prevalence of significant correlations across question prioritizations suggested the presence of underlying factors that may be accounting for the association. To test for the presence of more basic factors that may be accounting for the association between prioritizations, the matrix of intercorrelations presented in Tables 30(a), 30(b) and 30(c) were subjected to principal component factor analysis. Three factors were extracted and rotated according to the Varimax criterion. Only those factors with eigenvalues in excess of unity were retained. The rotated factor loadings are presented in Table 31 in Appendix C. The factors were identified by an examination of those combinations of levels and uses that had the highest loadings on each factor. Consequently, Factor 1 was identified as a Local Orientation, Factor 2 as a State Orientation, and Factor 3 as a National Orientation.

Examination of the loadings on Factor 1 indicates that local usage tends to be most highly related to Factor 1, hence the identification of the factor as Local Orientation. National usage tends to be moderately related to the factor. State usage has the lowest relation to the factor which is consistent with the findings that state prioritization tend to be less associated with local prioritizations than are national prioritizations. It is interesting to note that within each level, operations is most highly related to factor 1 at both local and national levels, whereas evaluation is the most related at the state level.

Investigation of Factor 2 reveals that state level uses are most highly related to the factor, hence the identification as a state orientation. The fact that state financial usage is the single most related state usage plus the fact that financial usage is also the single most highly related usage at both national and local levels suggests that the factor has a strong financial emphasis.

Examination of the loadings on Factor 3 show that national level uses have the highest loading on the factor thus accounting for its identification. Public information has the highest loading with the factor at the national, state and local levels which suggests public information is a strong aspect of the national orientation.

INTERPRETATION

The assessment of the informational needs of national, state and local users indicates a distinct demand for data descriptive of the vocational education enterprise at the "grass roots" level. The demand is most pronounced for data dealing with the characteristics of vocational instruction and curriculum, the characteristics of vocational students, the characteristics of vocational completers/early leavers and the characteristics of the local school. This suggests that users of vocational education data are in general most interested in knowing "who" is being served, "what" they are being served, and "what happens" as a result of their being served.

Informational needs, however, are not to be interpreted as necessarily congruent across all levels of users and uses. One of the major findings of this study is the greater similarity of national to local informational needs than of state to local informational needs. This finding contravenes the commonly accepted belief that state needs are more congruent with local needs than are national needs. Rather than a linear ordering with state needs being closer to local needs and national needs more removed, the results suggest a triangular constellation with national needs more congruent with both local and state needs, and local and state needs being more disparate.

The results of the cluster analysis reveal a distinctive pattern of needs across the three user levels. The national need for information for planning, evaluation, reporting requirements and public information as separate from the need for information for operations and for finance reflects a need for information for accountability purposes that is distinct from the need for information for operations and for financial reporting.

State need for information for planning, operation, finance and budgeting and reporting and for evaluation and public information reflects a need for information for internal administrative purposes that differs in order of priority from their need for information for use in evaluation and public information. Local needs appear to be relatively consistent across all use categories.

The results of the factor analysis of the association between need prioritizations indicate that local needs for information reflect a strong local orientation. The fact that local operations has the highest loading suggests that local need for information is most highly motivated by the exigencies associated with the actual delivery of vocational education services. The lower loadings on public information usage supports the contention that information at the local level is needed more to support the delivery of educational services than for local public relations purposes. Local needs for information generally have relatively low state orientation. Interesting enough, local information needs have a greater national than state orientation. A possible explanation is that a concern for the educational experience and the impact of that experience on the individual is a central theme of both national and local orientations.

State orientation, in contrast, tends to focus more on the administration function. State level demand for information for financial and budgetary purposes and for reporting requirements reflects a demand for information needed to fulfill the administrative function performed by state education agencies. Information needs for state level planning and operation has both a state and a national orientation which suggests that state needs in these areas share a common denominator with national needs. State need for information for evaluation purposes has a larger local and national than state orientation. This may be explained by the fact that evaluation is concerned more with the programmatic delivery of education services than with financial considerations. The argument that the state orientation has a large financial component is supported by the fact that local finance has the largest loading of any of the local uses on state orientation and that national finance has the largest loading of any of the national uses on state orientation.

The national orientation is most directly characterized by the need for information for public relations and for evaluation and least characterized by the need for financial information. This finding suggests that the pressure toward accountability at the national level is more a concern for the process, the product and the impact of vocational education than with its costs *per se*.

IMPLICATIONS

Development of a National Data System

The EDNEED data presented in this volume have direct implications for the development of a national vocational education data reporting and accounting system. An initial task in the development of a national data system is the selection of the constituent information elements. A logical approach to the selection of information elements is to select those elements that answer the most important questions as determined by an empirical assessment of the informational needs of the major users.

The selection of the core questions can be approached as a problem in benefit-cost analysis. What is required is a set of questions that result in maximum benefit (utility) to users of the data at minimum costs to producers of the data. Importance of the question as determined by the raters can be considered an indication of the utility of the question for user groups. Thus, the similarity index can be regarded as a measure of the utility of the question across user groups.

The final determination of importance of questions depends upon the relative weights assigned to levels and uses. As was done in this study, equal weights can be assigned to all levels and uses. The problem of combining levels and uses into a single importance (utility) measure, however, still remains. Questions can be prioritized according to the average of the similarity index over all uses and levels (Table 1), the average over levels for separate uses (Tables 2 through 7), the average over uses for each level (Tables 8 through 10), or the similarity index computed separately for each use at each level (Tables 11 through 28).

An argument could be made that a national vocational education data system should serve the needs of a national constituency. National needs as shown by the results of this study are associated with both state and local needs. Since national needs are more closely associated with both state and local needs than are state needs with local needs, the national level could be regarded as the most representative needs level. If this premise were acceptable, only the needs of the national level need be considered in priority determination and the remaining problem to be resolved would be the determination of the weights to be assigned to the uses. One alternative would be to weight the uses equally and to prioritize the questions according to average similarity index across uses (Table 8). Another alternative would be to weight the uses unequally. Weights might be assigned to each use by an application of Edwards' Multi-Attribute Utilities approach as described in Appendix B. A simplification could be achieved by taking advantage of the fact that national uses tend to group into three clusters: (planning, evaluating, reporting requirements and public information), (operations) and (finance). Instead of applying the Multi-Attribute Utilities approach separately for each use, the technique could be applied to each cluster of uses.

Prioritization of questions according to importance can be easily expanded to handle constraints regarding the content mixture of questions. Suppose, for example, that the information system were required to provide information on students, programs, program completers and leavers, staff, facilities and expenditures. Questions pertaining to each of these areas could be prioritized separately for each content area. Since the comparative weighting of the uses may differ according to content area, weighting for uses may have to be established separately for each content area. This could be readily accomplished by an application of the Multi-Attribute Utilities approach for each content area; e.g., student, program, etc.

Given that questions have been prioritized according to a suitably determined measure of utility, final selection depends upon consideration of the cost of collection. Ideally, an estimate of the collection costs required to answer each question is required. Unfortunately, such information is not generally available. Therefore, in order to apply benefit-cost procedures it is necessary to develop a surrogate cost measure.

One such measure is the number of states that currently collect the information needed to answer a particular question. The rationale for this measure is that the more states that have the capability to answer a question,the less the cost required to ensure that all states have the developed capability to collect information necessary to answer the question. Assessment of the current capacity of the states to answer the questions prioritized in this study will be reported in a subsequent study.

Given separate measures of utility and cost for each question, several options for the selection of questions are available. One such approach is to establish a cut-off point on the numbers of states currently able to answer the question as well as a minimum acceptable utility score. Questions are selected if their cost measure (number of states currently able to answer question) and utility measure (weighted similarity index) exceed the established cut-off scores. Number and content of questions selected by this scheme obviously depend upon the scores. If desired, content can be controlled by first sorting the questions by content area; e.g., students, programs, program completers and leavers, etc., and then selecting questions within each content area. Number of questions selected can be controlled by raising or lowering the cut-off until the desired numbers are selected.

Given that elements are prioritized within questions, similar cut-off points can be defined for elements, and those elements selected for which cost and utility measures are acceptable. Derivation of such cost estimates as to number of state agencies currently collecting particular elements, and the extent to which important questions are presently answerable, is the subject of an on-going research study (EDNEED II).

Once elements are identified, a next step is the design of a national information system in the development of a documented set of informational element specifications. These specifications would delimit each informational element according to such factors as: (1) title, (2) definition, (3) collection method, (4) level of aggregation, and (5) collection frequency. By so delineating each information element, a blueprint for the content of nationally uniform vocational education system could be produced and used to guide subsequent system development and implementation.

Needs Assessment Methodology

The EDNEED study has designed, developed and demonstrated an application of needs assessment methodology to the determination of information needs. The methodology is readily transferrable for use by state and local education agencies. The Classification document in its entirety or portions thereof can serve as an assessment instrument for local or state use. The questions are a synthesis of the major needs for information as expressed by a broad sampling of constituency groups. As such, these questions are likely to encompass the majority of those asked of vocational education at state and local levels. Comments regarding suggested changes and improvements contained in Volume IV are a rich source of information for those wishing to apply the methodology at state and local levels.

Design of vocational education information systems to meet the documented needs for information of a prescribed constituency is a reasoned means of protecting against the tendency for haphazard growth that plagues many agency information systems. Additions of informational capability in response to assessed need of a defined service clientele is more cost effective than patchwork additions in an attempt to be responsive to infrequent and unique demands from influential sources.

The assessment methodology can readily be modified to include ratings of frequency as well as importance. Together, they would provide a measure of the incidence and severity (criticality) of the demand for information. Those demands that are both frequent and critical would provide the most defensible rationale for additions to information system capability. Conversely, infrequent demand for relatively unimportant information would seem to be sound justification for deletion of information thus mitigating the common tendency to retain elements regardless of use history.

Future Research

As is usual with research, the results of Project EDNEED raised more questions than they answered. Additional research is needed to:

1. Verify if national needs are more similar to local needs than are state needs; and, if replicated, to determine possible explanatory factors.
2. Determine why national and local level users appear to place more relative importance on characteristics of vocational students and the characteristics of completers and early leavers than do state level users.
3. Verify and account for, if replicated, the fact that national uses cluster into three clusters consisting of planning, evaluating, reporting requirements, and public information in Cluster I, operations in Cluster II, and finance in Cluster III.
4. Verify and account for, if replicated, the fact that state uses cluster into two clusters consisting of planning, operations, finance and reporting requirements in Cluster I and evaluation and public information in Cluster II.
5. Verify and account for, if replicated, the fact that local prioritizations are so internally consistent that all local needs cluster into one group.
6. Verify that the prioritization for state operational needs has almost no association with any local prioritizations, and, if replicated, determine possible explanatory factors.
7. Verify the factor structure, and if replicated, to explain further (a) why local operations is most highly loaded on the local orientation factor, state finance is most highly loaded on the state orientation factor and public informa-

> tion is the most highly loaded national use on the national orientation factor; (b) finance was the highest loading within local, state and national uses on the state orientation factor; (c) public relations has the highest loading within local, state and national uses on the national orientation factor; and (d) operations has the highest loadings within the local and national but not state uses on the local orientation factor.

Much of the funded research effort to date with respect to management information systems has focused on their design, development, field testing and implementation with relatively little attention paid to what information is needed by what users for what purpose. The assumption appears to have been that the developed capacity to collect, store and retrieve information will *ipso facto* improve the quality of vocational education programs, services and activities. It is hoped that the present study will contribute to an increased likelihood that further development will be based on an assessment of user need and that user oriented information will increase the capability of management information systems to contribute to the improvement of vocational education at all levels.

APPENDICES

APPENDIX A

EXAMPLE OF PRIORITY RANKING PROCEDURES

EXAMPLE OF PRIORITY RANKING PROCEDURE

A hypothetical distribution of the ratings of importance of five questions assigned by four raters is presented below. The numbers beneath each rater reflect the importance rating assigned to that question. In this example, ratings can range from 1 to 5, with the lower numbers reflecting less importance. The maximum rating a question could receive across the four raters would total to 20 (5 x 4), and the minimum being 4 (1 x 4).

	Raters						
Question Number	Rater 1	Rater 2	Rater 3	Rater 4	Sum	Similarity Index	Priority Rank
1	1	1	2	5	9	.31	3
2	5	5	4	5	19	.91	1
3	3	2	2	3	10	.26	4
4	1	2	2	1	6	.10	5
5	1	2	2	5	10	.34	2

To the immediate right of the list of ratings given by Rater 4 is the sum of each of the question's ratings across the four raters. Looking down this column of sums it is clear that question number two received the highest ratings across raters and that question number four received the lowest ratings. Given just this information it would not be difficult to identify these two questions as being of the highest and lowest importance. However, turning to the remaining three questions (1, 3, 5), we cannot rely on merely the sum of their ratings to select the second most important question, since both questions three and five have identical sums of 10. In order to deal with such situations, the similarity index was computed for each question. The similarity index[1] gives a slight advantage to questions which receive high ratings (i.e., 4 or 5) by one or more of the raters as compared to questions with fewer or no high ratings. Applying this equation to questions three and five, both of which total 10, question five received a higher index value than question three.

A closer examination of the ratings given to these two questions reveals that they received identical ratings by Rater 1 and Rater 3. They were rated differently, however, by both Rater 1 and Rater 4. Rater 1 rated question three higher in importance than question five, with ratings of 3 and 1 respectively. Rater 4, on the other hand, rated question three lower than question five, with ratings of 3 and 5 respectively. While the absolute difference between ratings of 3 and 1 is the same as that between 5 and 3, a rating of 5 shows very high importance being given to a question while a rating of 3 reflects only moderate importance. The similarity index reflects this difference: question five received an index of .34 while item three had an index of .26.

It is important to notice that while the ratings assigned question number three result in a slightly greater sum than those assigned to question number one, question three has a slightly lower similarity index than does question number one. While this may appear to be counter-intuitive, it is a result of the high rating of 5 given to question number one. None of the raters rated question three as being of high importance, whereas Rater 4 rated question one as being of very high importance. Thus question one received a higher similarity index score than did question three.

---

[1] Similarity index $= \dfrac{\sum_{i=1}^{k} X_i^2}{k\,(X_{max})^2}$ where k = # of raters and X_i represents the rating on a scale of importance with a maximum value of X_{max}. In this example, X maximum = 5.

In the far right column of the chart are the rankings given to the questions according to the value of their similarity index. The ranking represents the prioritization of questions according to shared importance across raters. It should be emphasized, at this point, that the rankings represent relative rather than absolute measures of importance. To say that a question ranks second in priority conveys information about its importance in comparison with other questions but conveys no information about how important the question might be independently of other questions.

APPENDIX B

PROJECT EDNEED: DETERMINATION OF WEIGHTINGS TO BE USED IN PRIORITY DETERMINATION

PROJECT EDNEED: DETERMINATION OF WEIGHTINGS TO BE USED IN PRIORITY DETERMINATION

Background

Project EDNEED is essentially an informational needs assessment and prioritization and represents a first step in the rational development of a basic vocational education information system which could serve the vocational education data needs of national, state and local constituencies. In an effort to determine empirically the shared needs of data users at these three levels, the project compiled from various sources 323 frequently asked questions in vocational education and 2,340 information elements potentially capable of answering these questions. Questions and elements were classified in a document entitled Project EDNEED: Classification of Information for the Development of a National Vocational Education Information System. This document was checked and rated by 86 individuals, representative of 75 agencies across the three levels. For each question checked as being needed, respondents were also asked to rate the importance of each question on a seven point scale for each of six use categories: planning, operations, evaluation, finance and budgeting, reporting requirements, and public information.

Collection of the data from the rating and checking process is nearly complete and the design for its analysis has been developed. One problem, however, remains: that of determining the weights to be assigned. The weighting problem has three aspects: (1) What should be weighted? (2) Who should do the weighting? and (3) How should the weighting be done? Each aspect will be considered in succession in the present section of this paper.

(1) What Can/Should be Weighted?

The alternative dimensions for weighting are (a) the different agencies who rated the document, (b) the uses for which the data elements were considered to be important, and (c) the three levels of users, i.e., national, state and local.

Regarding dimension (a), project staff can find no valid reasons for assigning differential weights to agencies at the state and local levels. Although there may be criteria upon which one state or local school district might be judged more important than another, it would be fatuous to apply them in this case. In fact an effort was made to draw from both large and small states and secondary and postsecondary educational agencies. Assuming equal weights for state and local agencies would require that only the 23 agencies at the national level be weighted. It can be logically argued that all agencies at the national level are not equally central to the vocational education community, and thus should be differentially weighted.

Likewise, regarding dimensions (b) and (c) it might be argued that the six use categories and the three levels are not of equal importance and should be differentially weighted.

The table below illustrates the eight possible combinations of weighting dimensions. "Equal" means that all entities (i.e., all agencies) would receive equal weight. "Differential" means each would receive different weights. The number in parenthesis indicates the number of entities for that dimension, e.g., national, state and local are the three entities for the level dimension.

Weighting Dimensions

		Level (3)	Use (6)	Agency (23) (National Only)
ALTERNATIVES	1.	Equal	Equal	Equal
	2.	Equal	Equal	Differential
	3.	Equal	Differential	Equal
	4.	Equal	Differential	Differential
	5.	Differential	Equal	Equal
	6.	Differential	Equal	Differential
	7.	Differential	Differential	Equal
	8.	Differential	Differential	Differential

Alternative #2 above is recommended by the project staff. We believe that each level of federalism (national, state and local) is equally vital to an effective federal system. Similarly, all six use categories (planning, operations, evaluation, finance and budgeting reporting requirements, and public information) are equally important to effective management. As mentioned previously, however, the 23 national agencies are not equally central to vocational education and thus should be weighted differentially. Alternative #2 would provide for equal weighting of levels and uses, while allowing national agencies to be weighted differentially.

(2) Who Should Weight?

The original EDNEED proposal suggested four alternatives for obtaining weights: (1) have each questionnaire completer weight his own agency; (2) have each questionnaire completer weight all other agencies; (3) have representatives of the U. S. Office of Education set the weights; and (4) decide to judge each group equally important in which case the weighting process would be obviated. The proposal also suggested that the final decision on a weighting scheme would be made in consultation with the project officer.

Because of subsequent negotiated project changes and for the additional reasons listed below, the EDNEED staff unanimously favors alternative #3, which recommends that USOE/BOAE be responsible for the determination of the weights. The reasons are:

1. EDNEED is a USOE funded project and should be of prime usefulness to OE, although it will doubtless have implications for other agencies.
2. USOE is the only agency involved which is charged with the responsibility of administering the Vocational Education Acts.
3. If a national vocational education information system is mandated by Congressional legislation, USOE will likely have the responsibility for managing its design and implementation.

The project staff further suggests that the decisions regarding the weighting be made by the project officer and such other persons as he may want to involve. The actual weighting process, however, should involve as many individuals as possible in BOAE.

(3) How Should the Weighting Be Done?

If a decision is made to weight all dimensions equally (alternative #1 in table), then obviously no weighting technique will be necessary. With the expectation that at least some dimension would be weighted differentially, the project staff considered a number of techniques: paired comparisons, forced choice, Q-sorts, Likert Scale judgements, weighted groups and an empirical technique based on the breadth and depth of agency information requirements. All were found inferior (for our purposes) to the Edwards Multi-Attribute Utilities Approach[1] which provides ratio data based upon the subjective judgement of a number of individuals. Only steps 5, 6 and 7 of the ten step approach will be necessary to weight any of the EDNEED dimensions.

Briefly, those steps in the Edwards technique require raters to first arrange the entities of the dimension to be weighted in rank order, then assign a number of points to each, preserving ratios. This is accomplished by assigning the least important entity a value of 10 and then working up to the most important. Entities which receive 80 points, for example, are 8 times as important as those receiving ten, since ratios are preserved. A form for the differential weighting of agencies would resemble the one on the following page.

---

QUESTION 7 : WHAT IS THE NUMBER OF BUILDINGS ON THE STATE SITE?

	PLANNING	OPERATION	EVALUATION	FINANCE	REPORTING	PUBLIC INFO	TOTAL
NATIONAL	307.5	303.5	305.5	252.0	313.0	312.5	315.5
STATE	266.5	248.0	286.5	225.5	303.0	256.5	292.0
LOCAL	299.5	299.5	299.5	299.0	297.0	293.5	301.5

RANK (OVER ALL USES AND LEVELS): 317.0

FILE 17 : SEA VOCATIONAL PROPERTY CHARACTERISTICS

QUESTION 10 : WHAT ARE THE COSTS AND VALUES OF EACH BUILDING ON THE STATE SITE?

	PLANNING	OPERATION	EVALUATION	FINANCE	REPORTING	PUBLIC INFO	TOTAL
NATIONAL	318.0	303.5	316.5	226.5	313.0	312.5	317.0
STATE	251.0	303.0	286.5	201.0	303.0	256.5	296.5
LOCAL	299.5	299.5	299.5	299.0	297.0	293.5	301.5

RANK (OVER ALL USES AND LEVELS): 318.0

FILE 17 : SEA VOCATIONAL PROPERTY CHARACTERISTICS

QUESTION 12 : WHAT ARE THE ROOM CHARACTERISTICS WITHIN EACH BUILDING ON THE STATE SITE?

	PLANNING	OPERATION	EVALUATION	FINANCE	REPORTING	PUBLIC INFO	TOTAL
NATIONAL	301.5	282.0	305.5	252.0	313.0	312.5	312.0
STATE	300.0	219.5	202.0	299.5	303.0	256.5	305.0
LOCAL	299.5	299.5	299.5	299.0	297.0	293.5	301.5

QUESTIONS RANKED BY IMPORTANCE (USES AND LEVELS COMBINED)
COMPARISON OF RANKINGS ACROSS LEVEL AND USE CATEGORIES

RANK (OVER ALL USES AND LEVELS): 319.0

FILE 17 : SEA VOCATIONAL PROPERTY CHARACTERISTICS

QUESTION 6 : WHAT IS THE AREA OF THE STATE SITE?

	PLANNING	OPERATION	EVALUATION	FINANCE	REPORTING	PUBLIC INFO	TOTAL
NATIONAL	307.5	314.0	305.5	270.5	313.0	312.5	318.0
STATE	283.0	248.0	286.5	299.5	303.0	256.5	306.5
LOCAL	299.5	299.5	299.5	299.0	297.0	293.5	301.5

RANK (OVER ALL USES AND LEVELS): 320.0

FILE 17 : SEA VOCATIONAL PROPERTY CHARACTERISTICS

QUESTION 4 : WHEN WAS THE STATE SITE ACQUIRED?

	PLANNING	OPERATION	EVALUATION	FINANCE	REPORTING	PUBLIC INFO	TOTAL
NATIONAL	318.0	321.0	316.5	270.5	313.0	312.5	323.0
STATE	273.5	303.0	286.5	270.5	303.0	256.5	308.0
LOCAL	299.5	299.5	299.5	299.0	297.0	293.5	301.5

RANK (OVER ALL USES AND LEVELS): 321.0

FILE 17 : SEA VOCATIONAL PROPERTY CHARACTERISTICS

QUESTION 18 : WHAT ARE THE CHARACTERISTICS OF OTHER EQUIPMENT REQUIRED FOR VOCATIONAL EDUCATION AT THE STATE LEVEL?

	PLANNING	OPERATION	EVALUATION	FINANCE	REPORTING	PUBLIC INFO	TOTAL
NATIONAL	318.0	316.0	316.5	311.5	313.0	283.0	319.0
STATE	300.0	274.5	286.5	270.5	303.0	256.5	310.0
LOCAL	299.5	299.5	299.5	299.0	297.0	293.5	301.5

QUESTIONS RANKED BY IMPORTANCE (USES AND LEVELS COMBINED)
COMPARISON OF RANKINGS ACROSS LEVEL AND USE CATEGORIES

RANK (OVER ALL USES AND LEVELS): 322.0

FILE 17 : SEA VOCATIONAL PROPERTY CHARACTERISTICS

QUESTION 11 : HOW MUCH OF THE AREA OF EACH BUILDING IS USED FOR CIRCULATION AREAS IN AND BETWEEN BUILDINGS?

	PLANNING	OPERATION	EVALUATION	FINANCE	REPORTING	PUBLIC INFO	TOTAL
NATIONAL	318.0	321.0	316.5	226.5	313.0	312.5	320.0
STATE	313.5	303.0	286.5	299.5	303.0	256.5	319.0
LOCAL	299.5	299.5	299.5	299.0	297.0	293.5	301.5

RANK (OVER ALL USES AND LEVELS): 323.0

FILE 17 : SEA VOCATIONAL PROPERTY CHARACTERISTICS

QUESTION 17 : WHAT ARE THE CHARACTERISTICS OF THE SMALL TOOLS AND SMALL EQUIPMENT USED IN VOCATIONAL EDUCATION AT THE STATE SITE?

	PLANNING	OPERATION	EVALUATION	FINANCE	REPORTING	PUBLIC INFO	TOTAL
NATIONAL	318.0	317.5	316.5	311.5	313.0	292.0	321.0
STATE	313.5	303.0	286.5	299.5	303.0	256.5	319.0
LOCAL	299.5	299.5	299.5	299.0	297.0	293.5	301.5
